Although the recommended program is directed primarily at NASA and the National Science Foundation for action, the report also recommends actions by other federal agencies, especially the parts of the National Oceanic and Atmospheric Administration charged with the day-to-day operational forecast of space weather. In addition to the recommendations included in this summary, related recommendations are presented in this report.

**Nuclear Power Plant Design and Analysis Codes** Jun Wang, Xin Li, Chris Allison, Judy Hohorst, 2020-11-10 Nuclear Power Plant Design and Analysis Codes Development, Validation and Application presents the latest research on the most widely used nuclear codes and the wealth of successful accomplishments which have been achieved over the past decades by experts in the field. Editors Wang, Li, Allison and Hohorst and their team of authors provide readers with a comprehensive understanding of nuclear code development and how to apply it to their work and research to make their energy production more flexible, economical, reliable and safe. Written in an accessible and practical way, each chapter considers strengths and limitations, data availability, needs, verification and validation methodologies and quality assurance guidelines to develop thorough and robust models and simulation tools both inside and outside a nuclear setting. This book benefits those working in nuclear reactor physics and thermal hydraulics as well as those involved in nuclear reactor licensing. It also provides early career researchers with a solid understanding of fundamental knowledge of mainstream nuclear modelling codes as well as the more experienced engineers seeking advanced information on the best solutions to suit their needs. Captures important research conducted over last few decades by experts and allows new researchers and professionals to learn from the work of their predecessors. Puzzling Physics Problems P. Gnädig,G. Honyek,K. F. Riley,2001-08-13 This book will strengthen a student s grasp of the laws of physics by applying them to practical situations and problems that yield more easily to intuitive insight than brute force methods and complex mathematics These intriguing problems chosen almost exclusively from classical non quantum physics are posed in accessible non technical language requiring the student to select the right framework in which to analyse the situation and decide which branches of physics are involved The level of sophistication needed to tackle most of the two hundred problems is that of the exceptional school student the good undergraduate or competent graduate student The book will be valuable to undergraduates preparing for general physics papers It is hoped that even some physics professors will find the more difficult questions challenging By contrast mathematical demands are minimal and do not go beyond elementary calculus This intriguing book of physics problems should prove instructive challenging and fun
