Change education Issues In Perspective:

Change/education Leonard Glenn Smith, 1995-01-01 Each academic year more than 1200 students at Northern Illinois University enroll in a course entitled Education as a agent for change The course encourages students to examine their inherited presuppositions to be open to understanding life from perspectives quite different from those of their own families The editors and their confreres have chosen the material contained in this book because it illustrates important issues around the three themes of education change and agency The selections in the first edition were a result of many hours of intense discussion In the second edition 25 percent of the material is new The items retained from the first edition have all provoked animated discussions We do not expect everyone to reach a common opinion as a result of these readings The editors themselves disagree about many issues We all agree on one point dialog is important in learning and each participant is ultimately responsible for her or his own part of the conversation and for his or her own conclusions We hope students who read this book will enter into dialog with each author each other and with their co learner instructors about the issues We hope readers will experience a heightened sense of their own identities become critically informed about multiculturalism and gain a platform for thinking about and planning for the future

Climate Change Education National Research Council, Division of Behavioral and Social Sciences and Education, Board on Science Education, 2012-01-12 The global scientific and policy community now unequivocally accepts that human activities cause global climate change Although information on climate change is readily available the nation still seems unprepared or unwilling to respond effectively to climate change due partly to a general lack of public understanding of climate change issues and opportunities for effective responses The reality of global climate change lends increasing urgency to the need for effective education on earth system science as well as on the human and behavioral dimensions of climate change from broad societal action to smart energy choices at the household level The public's limited understanding of climate change is partly the result of four critical challenges that have slowed development and delivery of effective climate change education As one response to these challenges Congress in its 2009 and 2010 appropriation process requested that the National Science Foundation NSF create a program in climate change education to provide funding to external grantees to improve climate change education in the United States To support and strengthen these education initiatives the Board on Science Education of the National Research Council NRC created the Climate Change Education Roundtable The Roundtable convened two

workshops Climate Change Education Goals Audiences and Strategies is a summary of the discussions and presentations from the first workshop held October 21 and 22 2010 This report focuses on two primary topics public understanding and decision maker support It should be viewed as an initial step in examining the research on climate change and applying it in specific policy circumstances

No Child Left Behind and the Transformation of Federal Education Policy, 1965-2005 Patrick J. McGuinn,2006 Education is intimately connected to many of the most important and contentious questions confronting American society from race to jobs to taxes and the competitive pressures of the global economy have only enhanced its significance Elementary and secondary schooling has long been the province of state and local governments but when George W Bush signed into law the No Child Left Behind Act in 2002 it signaled an unprecedented expansion of the federal role in public education This book provides the first balanced in depth analysis of how No Child Left Behind NCLB became law Patrick McGuinn a political scientist with hands on experience in secondary education explains how this happened despite the country s long history of decentralized school governance and the longstanding opposition of both liberals and conservatives to an active reform oriented federal role in schools His book provides the essential political context for understanding NCLB the controversies surrounding its implementation and forthcoming debates over its reauthorization how the struggle to

define the federal role in school reform took center stage in debates over the appropriate role of the government in promoting opportunity and social welfare He places the evolution of the federal role in schools within the context of broader institutional ideological and political changes that have swept the nation since the 1965 Elementary and Secondary Education Act chronicles the concerns raised by the 1983 report A Nation at Risk and shows how education became a major campaign issue for both parties in the 1990s McGuinn argues that the emergence of swing issues such as education can facilitate major policy change even as they influence the direction of wider political debates and partisan conflict McGuinn traces the Republican shift from seeking to eliminate the U S Department of Education to embracing federal leadership in school reform then details the negotiations over NCLB the forces that shaped its final provisions and the ways in which the law constitutes a new federal education policy regime against which states have now begun to rebel and that only by understanding the unique dynamics of national education politics will reformers be able to craft a more effective national role in school reform
