**Lead Toxicity: Challenges and Solution** Nitish Kumar, Amrit Kumar Jha, 2023-08-08 This book delivers an outline to graduate undergraduate students and researchers as well as academicians who are working on lead toxicity with respect to remediation. It covers sources of lead contamination and its impact on human health and on prospective remediation through multi disciplinary approaches with application of recent advanced biological technology. Lead is among the elements that have been most extensively used by man over time. This has led to extensive pollution of surface soils on the local scale mainly associated with mining and smelting of the metal and addition of organic lead compounds to petrol. Release of lead to the atmosphere from various high temperature processes has led to surface contamination on the regional and even global scale. In addition plants grown on lead rich soils incorporate lead and thus the concentration of lead in crop plants may be increased. Lead enters in the food chain through consumption of plant material. A high concentration of lead has been found to be harmful to vegetation. As the lead concentration increases it adversely affects several biological parameters and eventually renders the soil barren. This edited book brings together a diverse group of researchers to address the challenges posed by global mass poisoning caused by lead contamination of soil and plants. The book sheds light on this global environmental issue and proposes solutions to contamination through multi disciplinary approaches. This book contains three sections. The first section describes the different sources and distribution of lead in soil and plant ecosystems. The second section explains the health risks linked to lead toxicity. The third section addresses sustainable lead toxicity mitigation strategies and the potential applications of recent biological technology in providing solutions. This book is a valuable resource to students, academics, researchers and environmental professionals doing fieldwork on lead contamination throughout the world.

**Bioremediation: Challenges and Advancements** Manikant Tripathi, Durgesh Narain Singh, 2022-03-08 Waste management is one of the major challenges for environmental and public health organizations for maintaining safety standards in any area. Population growth and urbanization increase the difficulty in maintaining a sustainable waste management system. Bioremediation refers to the use of living organisms in processes designed to remove toxic chemicals present in waste material. Bioremediation represents a sustainable way to remove a range of environmental pollutants. *Bioremediation: Challenges and Advancements* covers the subject of bioremediation in eight chapters that focus on a broad range of waste sources, their adverse impacts on the ecosystem and the advanced strategies for their remediation. Each chapter also highlights the problems encountered in bioremediation processes. Key features: Comprehensive coverage of bioremediation in 8 reader friendly chapters. Highlights methods and challenges of bioremediation in one volume. Introduces

the reader to bioremediation Explains recent biotechnological methods for removing heavy metals and xenobiotic compounds Describes strategies including physical chemical and biological methods to mitigate radioactive waste from contaminated sites and water bodies Details the use of microbial aided remediation techniques for the management of biomedical and electronic wastes and its impact on the ecosystem Describes bioremediation technologies for decontamination of solid waste pollutants Showcases the application of Omics approaches such as genomics transcriptomics proteomics and metabolomics to improve bioremediation processes Covers bioremediation of agro wastes Includes detailed references This book is an informative reference for scholars researchers undergraduate and graduate students of environmental sciences microbiology and biotechnology professionals environmental engineers and researchers giving each a good understanding of the significance of bioremediation in solid waste management and the restoration of contaminated sites

Gasotransmitters Signaling in Plants under Challenging Environment Tariq Aftab, Francisco J. Corpas, 2023-11-25 Abiotic stressors such as drought extreme temperatures heavy metals or high salinity are causing huge crop losses worldwide These abiotic stressors are expected to become more extreme less predictable and more widespread in the near future The harm of abiotic stresses includes the disruption of cellular redox homeostasis reactive oxygen species ROS production and oxidative stress in the plant Plants have different mechanisms to fight stress and these mechanisms are responsible for maintaining the required homeostasis in plants Research on gasotransmitters is rapidly expanding and knowledge regarding the potential of gasotransmitters in biology and medicine is accumulating Over the past few decades the roles of these signaling molecules especially NO and H<sub>2</sub>S have been extensively studied for their application in plants Recently the emissions of endogenous gasotransmitters in plants have been widely studied and analyzed thereby providing information to facilitate our understanding of new gasotransmitters signaling pathways Given the multidimensional role of these signaling molecules research over the past decades in mitigating abiotic stresses in plant biology and from an agriculture point of view we intend to bring forth a comprehensive volume Gasotransmitters Signaling in
