

# Changing the Variable: u-Substitution with Exponential Functions

by Sophia

## WHAT'S COVERED

In this lesson, you will find antiderivatives of composite functions that involve exponential functions. Specifically, this lesson will cover:

1. Indefinite Integrals Where the Inner Function Is Exponential
2. Indefinite Integrals Where the Outer Function Is Exponential

## 1. Indefinite Integrals Where the Inner Function Is Exponential

Even though we talked about exponential functions with base “ $a$ ” in the past, we will focus on exponential functions with base  $e$  for the sake of finding antiderivatives.

Recall the derivative formula:  $\frac{d}{dx}(e^u) = e^u \cdot u'$

These will be useful in making substitutions where the inside function is exponential.

→ **EXAMPLE** Find the indefinite integral:  $\int e^x \sin(e^x) dx$

Note that  $e^x$  is the inner function, and it is also a factor in the integrand. This means  $u$ -substitution will work.

$\int e^x \sin(e^x) dx$	Start with the original expression.
$= \int \sin u du$	Make the substitution: $u = e^x$
	Find the differential: $du = e^x dx$
	Replace the inner $e^x$ with $u$ and $dx$ with $\frac{1}{e^x} du$ .
$= -\cos u + C$	Use the antiderivative rule for $\sin u$ .
$= -\cos(e^x) + C$	Back-substitute $u = e^x$ .

Thus,  $\int e^x \sin(e^x) dx = -\cos(e^x) + C$ .

Smith, Matthew Voigt, April Ström, David C. Webb, W. Gary Martin, 2021-05-05 The purpose of this handbook is to help launch institutional transformations in mathematics departments to improve student success We report findings from the Student Engagement in Mathematics through an Institutional Network for Active Learning SEMINAL study SEMINAL s purpose is to help change agents those looking to or currently attempting to enact change within mathematics departments and beyond trying to reform the instruction of their lower division mathematics courses in order to promote high achievement for all students SEMINAL specifically studies the change mechanisms that allow postsecondary institutions to incorporate and sustain active learning in Precalculus to Calculus 2 learning environments Out of the approximately 2.5 million students enrolled in collegiate mathematics courses each year over 90% are enrolled in Precalculus to Calculus 2 courses Forty four percent of mathematics departments think active learning mathematics strategies are important for Precalculus to Calculus 2 courses but only 15 percent state that they are very successful at implementing them Therefore insights into the following research question will help with institutional transformations What conditions strategies interventions and actions at the departmental and classroom levels contribute to the initiation implementation and institutional sustainability of active learning in the undergraduate calculus sequence Precalculus to Calculus 2 across varied institutions      Changing Core Mathematics David C. Arney, Donald B. Small, 2002 Mathematicians engineers and physical scientists discuss how the first two years of a core college mathematics program should change over the next five to ten years to meet the mathematical needs of partner disciplines and society s needs arising from globalization and the information age They examine issues related to goals and content anticipated advances in technology and new instructional techniques and make recommendations for future course designs that emphasize modeling inquiry and conceptual understanding Arney is dean of the School of Mathematics and Sciences at the College of Saint Rose Small is on the faculty of the Department of Mathematics at the United States Military Academy There is no subject index Annotation copyrighted by Book News Inc Portland OR      *MAA Notes*, 1983      *Making the Connection* Marilyn Paula Carlson, Chris Rasmussen, 2008 The chapters in this volume convey insights from mathematics education research that have direct implications for anyone interested in improving teaching and learning in undergraduate mathematics This synthesis of research on learning and teaching mathematics provides relevant information for any math department or individual faculty member who is working to improve introductory proof courses the longitudinal coherence of precalculus through differential equations students mathematical thinking and problem solving abilities and students understanding of fundamental ideas such as variable and rate of change Other chapters include information about programs that have been successful in supporting students continued study of mathematics The authors provide many examples and

ideas to help the reader infuse the knowledge from mathematics education research into mathematics teaching practice University mathematicians and community college faculty spend much of their time engaged in work to improve their teaching Frequently they are left to their own experiences and informal conversations with colleagues to develop new approaches to support student learning and their continuation in mathematics Over the past 30 years research in undergraduate mathematics education has produced knowledge about the development of mathematical understandings and models for supporting students mathematical learning Currently very little of this knowledge is affecting teaching practice We hope that this volume will open a meaningful dialogue between researchers and practitioners toward the goal of realizing improvements in undergraduate mathematics curriculum and instruction

Mathematics in Service to the Community Charles Robert Hadlock, 2005 Publisher description This book looks at the wide variety of ways in which math statistics and math education teachers have incorporated service learning into their courses These projects are not just stand alone community service initiatives but rather they specifically target the improvement of mathematics skills and insights of the college students in the courses with which they are associated In some cases the projects are the major focus of the courses In others they may range from an essential component to one of several options The book also speculates about heretofore untapped possibilities for service learning even including courses in pure mathematics College faculty often may not fully appreciate the wide range of support mechanisms for such ventures even within their own institutions so the book includes a lengthy chapter on the details of converting a rough idea to a solid action plan sometimes even picking up financial support and other often unexpected benefits along the way Creative teachers rarely implement a project in exactly the same way as a colleague might have so the emphasis here is to display a wide range of successful projects in order to encourage readers to develop some of their own

Garfield, 2005 This is a book of stories about teaching statistics These stories are told by fourteen different instructors of innovative statistics courses who demonstrate that learning statistics can be a positive

meaningful and even exciting experience Despite the prevailing opinion that statistics courses are dull and difficult for students these stories paint quite a different picture In the classes of the instructors whose stories fill this book students are engaged in learning are empowered to do statistics and appreciate the instructional methods of their teachers The instructors profiled in this book are inspiring dedicated teachers who have devoted considerable effort to creating courses and materials that enable students to successfully learn statistics Each chapter begins by describing how the author became a teacher of statistics then provides details about the courses they currently teach describing their teaching method textbook types of student assessments and uses of technology One typical class is described in detail to provide a snapshot of what each person's teaching looks like The writers then tell the story of the process they went through in developing an innovative course and conclude their chapters with a discussion of their future plans for course revision or development As you read these stories you will learn about some great activities some helpful technological tools and some innovative assessment methods By reading these stories teachers of statistics will understand and be motivated to try different ways to implement reform recommendations so that these recommendations may continue to lead to a variety of new materials activities and teaching approaches I hope that teachers of statistics may be inspired by these stories and feel encouraged to try new methods leave behind more traditional approaches to teaching statistics and carefully examine the effect of their teaching on student learning Publisher **Quantitative Literacy** Bernard L.
