## Changing Islands:

**Earth's Changing Islands** Neil Morris, 2003 Looks at the geography and people that make up island regions throughout the world focusing on the changing characteristics of both **Island Environments in a Changing World** Lawrence R. Walker, Peter Bellingham, 2011-03-24 Islands represent unique opportunities to examine human interaction with the natural environment They capture the human imagination as remote vulnerable and exotic yet there is comparatively little understanding of their basic geology geography or the impact of island colonization by plants animals and humans This detailed study of island environments focuses on nine island groups including Hawaii New Zealand and the British Isles exploring their differing geology geography climate and soils as well as the varying effects of human actions It illustrates the natural and anthropogenic disturbances common to island groups all of which face an uncertain future clouded by extinctions of endemic flora and fauna growing populations of invasive species and burgeoning resident and tourist populations Examining the natural and human history of each island group from early settlement onwards the book provides a critique of the concept of sustainable growth and offers realistic guidelines for future island management *Zoological Results Based on Material from New Britain, New Guinea, Loyalty Islands and Elsewhere, Collected During the Years 1895, 1896 and 1897* Arthur Willey, 1898 **Climate Change and Tradition in a Small Island State** Peter Rudiak-Gould, 2013-07-18 The citizens of the Marshall Islands have been told that climate change will doom their country and they have seen confirmatory omens in the land air and sea This book investigates how grassroots Marshallese society has interpreted and responded to this threat as intimated by local observation science communication and Biblical exegesis With grounds to dismiss or ignore the threat Marshall Islanders have instead embraced it with reasons to forswear guilt and responsibility they have instead adopted in group blame and having been instructed that resettlement is necessary they have vowed instead to retain the homeland These dominant local responses can be understood as arising from a pre existing vigorous constellation of Marshallese ideas termed modernity the trickster a historically inspired narrative of self inflicted cultural decline and seduction by Euro American modernity This study illuminates islander agency at the intersection of the local and the global and suggests a theory of risk perception based on ideological commitment to narratives of historical progress and decline *Zoological Results Based on Material from New Britain, New Guinea, Loyalty Islands and Elsewhere* Arthur Willey, 1902 **Island Life** Anita Ganeri, 2013-02-14 What is it like to live on an island By focusing on a child's experience of living on an island this book explores life through topics such as going to school getting supplies and transport as well as information on history geography wildlife festivals and local traditions The reader is encouraged to compare and contrast life on British islands with life on islands around the world Atoll Island States and International Law Lilian Yamamoto, Miguel Esteban, 2013-10-25 Atoll Island States exist on top of what is perceived to be one of the planet's most vulnerable ecosystems atolls It has been predicted that an increase in the pace of sea level rise brought about by increasing greenhouse gas

concentrations in the atmosphere will cause them to disappear forcing their inhabitants to migrate The present book represents a multidisciplinary legal and engineering perspective on this problem challenging some common misconceptions regarding atolls and their vulnerability to sea level rise Coral islands have survived past changes in sea levels and it is the survival of coral reefs what will be crucial for their continued existence These islands are important for their inhabitants as they represent not only their ancestral agricultural lands and heritage but also a source of revenue through the exploitation of the maritime areas associated with them However even if faced with extreme climate change it could theoretically be possible for the richer Atoll Island States to engineer ways to prevent their main islands from disappearing though sadly not all will have the required financial resources to do so As islands become progressively uninhabitable their residents will be forced to settle in foreign lands and could become stateless if the Atoll Island State ceases to be recognized as a sovereign country However rather than tackling this problem by entering into lengthy negotiations over new treaties more practical solutions encompassing bilateral negotiations or the possibility of acquiring small new territories should be explored This would make it possible for Atoll Island States in the future to keep some sort of international sovereign personality which could benefit the descendents of its present day inhabitants
