*The World Behind the Scenes* Percy Fitzgerald, 1881      *THE DOCTOR-PATIENT RELATIONSHIP IN THE CHANGING HEALTH SCENE* DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE,      **Attention and consciousness in different senses** Naotsugu Tsuchiya, Jeroen J. Van Boxtel, 2013-06-03

Although often used in everyday speech and in the scholarly literature selective attention and consciousness lack clear undisputed definitions Partly because of this deficit there exists a lively debate on the relationship between the two Nevertheless attention has been studied scientifically for a long time because a variety of tasks allow researchers to control several of its aspects e.g. focused and feature based attention Consciousness as a scientific subject of study has emerged more recently but is now rapidly gaining traction Scientific studies of consciousness concern the state or level of consciousness e.g. awake as opposed to in coma dreamless sleep or under anaesthesia as well as the contents of consciousness or the phenomenology of perception With the increase in consciousness focused research there is a concomitant surge in research examining the relationship between attention and consciousness This relationship between attention and consciousness is the topic of this Research Topic Contributions related to or focused solely on attention or on consciousness will not be considered It had long been assumed that attention and consciousness are inextricably intertwined two sides of the same coin However recently substantial evidence has emerged that attention and consciousness are interacting but separable processes It is however debated how tight the interactions are and what the exact nature of the relationship is Therefore we invite researchers from different

camps to provide opinionated but balanced literature reviews Different groups will interpret the same data in different ways We feel that combining these views in one Research Topic is immensely valuable to researchers from different fields Apart from reviews we also invite potential contributors to provide new and exciting evidence in the form of original contributions that may support any of the different views Even though attention and consciousness are critical aspects of many different cognitive processes they are mainly studied though not exclusively in the domain of visual perception In other sensory modalities e g olfaction or audition it is currently not clear whether distinctions between attention and consciousness exist which is even more true for other cognitive processes such as memory Therefore we specifically invite contributions covering the auditory somatosensory olfactory and memory domain We ask all contributors to provide discussions on the relationship between attention and consciousness and focus on 1 the influence of attention on sensory processing 2 the formation of conscious perception 3 the evidence for unconscious processing and its modulation by attention 4 potential indications for dissociations between attention and consciousness e g does paying attention to a stimulus decrease performance on e g a discrimination task 5 neuroimaging and neurophysiology data pertaining to these questions Often one is caught in one's own research field and lacks the time or the knowledge to delve into another field This Research Topic should provide a great overview in great breadth of the current state of knowledge on the links between attention and consciousness and their interactions in several different sensory modalities

**Play Production in America** Arthur Edwin Krows, 1916 **The Oxford Companion to Consciousness** Tim Bayne, Axel Cleeremans, Patrick Wilken, 2009-06-04 Consciousness is undoubtedly one of the last remaining scientific mysteries and

hence one of the greatest contemporary scientific challenges How does the brain's activity result in the rich phenomenology that characterizes our waking life Are animals conscious Why did consciousness evolve How does science proceed to answer such questions Can we define what consciousness is Can we measure it Can we use experimental results to further our understanding of disorders of consciousness such as those seen in schizophrenia delirium or altered states of consciousness These questions are at the heart of contemporary research in the domain Answering them requires a fundamentally interdisciplinary approach that engages not only philosophers but also neuroscientists and psychologists in a joint effort to develop novel approaches that reflect both the stunning recent advances in imaging methods as well as the continuing refinement of our concepts of consciousness In this light the Oxford Companion to Consciousness is the most complete authoritative survey of contemporary research on consciousness Five years in the making and including over 250 concise entries written by leaders in the field the volume covers both fundamental knowledge as well as more recent advances in this rapidly changing domain Structured as an easy to use dictionary and extensively cross referenced the Companion offers contributions from philosophy of mind to neuroscience from experimental psychology to clinical findings so reflecting the profoundly interdisciplinary nature of the domain Particular care has been taken to ensure that each of the entries is accessible to the general reader and that the overall volume represents a comprehensive snapshot of the contemporary study of consciousness The result is a unique compendium that will prove indispensable to anyone interested in consciousness from beginning students wishing to clarify a concept to professional consciousness researchers looking for the best characterization of a particular phenomenon
