Artificial Intelligence and the Perspective of Autonomous Surgery Konrad Karcz, Zbigniew Nawrat, Andrew A. Gumbs, 2024-12-23 This book has two heroes: the surgeon and the robot. The education system and intelligence can create a human who is specialized in surgery. While the accurate analysis of data with machine learning, AI can create a more autonomous robot for surgery. Currently, robots still require human input in the decision-making loop; whether or not this will always be the case is an issue that still needs to be debated, analyzed, and studied preferably by computer scientists AND surgeons. Surgeons and

their patients are increasingly opting for less invasive surgeries. However, among their many advantages, there is an important issue: less invasiveness always means limited access to direct information from the operating field. 3D image, local palpation, sensations, all information about the whole patient and feedback from the accompanying team during teleoperation. To increase precision, we are increasingly using surgical robots and mechatronic instruments. The less invasive the surgery and the greater the precision of robotic micro instruments, the greater the role of artificial intelligence methods, especially machine learning, which supports the surgeon in making decisions, planning and performing the procedure. The development of artificial intelligence and further evidence of its effectiveness in various application fields mean that the work of a doctor is changing today. In the book, we address the issue of AI surgery, asking whether this means that an AI surgeon will be created. A key question about autonomous surgical robots will come up regularly: how far can we go with their autonomy while maintaining safe and effective procedures. The book provides useful information on both early successes, failures, and expectations related to the development of new technologies in surgery. It is a guide written by various experts intended for a wide audience, from medical development planners through students to doctors and decision makers. **World**

Organization of Systems and Cybernetics 18. Congress-WOSC2021 Igor Perko, Raul Espejo, Vladimir Lepskiy, Dmitry A. Novikov, 2022-08-30. Important world institutions such as the United Nations UN, the World Health Organization WHO, the International Energy Agency IEA, and the Organization for Economic Co-operation and Development OECD have publicly recognizing the highly interconnected nature of our world and therefore the relevance of systemic thinking and cybernetics as leading knowledge foundations to deal with the complexity of economic, social, and environmental issues. This recognition was the driving force of the Internet discussions held by participants to the World Organisation of Systems and Cybernetics 18th Congress, which last September 27 to 29 WOSC 2021. More than ever, we needed to debate and develop current ontological, epistemological, and methodological approaches to the understanding of the future of humanity. WOSC organized this event in collaboration with the Russian Academy of Sciences RAS. Scientists of this Academy, together with scientists from all over the world, made contributions to improving communications beyond particular nation states and regions toward the clarification of global issues like governance, health, education, technology, art, and others. Our aim in WOSC 2021 was bringing together scientists and researchers to collaborative debates at all levels, from local communities to global societies. At the end of the Congress, scientists were invited to submit contributions to this Springer Nature book along the following four themes: firstly, philosophical and methodological foundations for the development of the systems approach and cybernetics; secondly, the cybernetics of society, ecology, and governance; thirdly, digital technologies and physical realities merging into a hybrid reality; and fourthly, the transdisciplinarity of systems sciences and cybernetics applied to the further development of knowledge areas such as education, embodiment of social policies, and the arts. About 25 contributions were accepted for publication in this book. We see this as one of WOSC's important contribution to the scientific community around
