Handbook of Biological Confocal Microscopy James B. Pawley, 1995 This newly updated second edition details the latest instrumentation and applications of the confocal microscope This edition features 21 new chapters and includes information on preparing living specimens for the confocal microscope

*Biological Electron Microscopy* Michael J. Dykstra, Laura E. Reuss, 2003-12-31 Electron microscopy is frequently portrayed as a discipline that stands alone separated from molecular biology light microscopy physiology and biochemistry among other disciplines It is also presented as a technically demanding discipline operating largely in the sphere of black boxes and governed by many absolute laws of procedure At the introductory level this portrayal does the discipline and the student a disservice The instrumentation we use is complex but ultimately understandable and more importantly repairable The procedures we employ for preparing tissues and cells are not totally understood but enough information is available to allow investigators to make reasonable choices concerning the best techniques to apply to their particular problems There are countless specialized techniques in the field of electron and light microscopy that require the acquisition of specialized knowledge particularly for interpretation of results electron tomography and energy dispersive spectroscopy immediately come to mind but most laboratories possessing the equipment to effect these approaches have specialists to help the casual user The advent of computer operated electron microscopes has also broadened access to these instruments allowing users with little technical knowledge about electron microscope design to quickly become operators This has been a welcome advance because earlier instruments required a level of knowledge about electron optics and vacuum systems to produce optimal photographs and to avoid crashing the instruments that typically made it difficult for beginners

*Practical Electron Microscopy* Elaine Evelyn Hunter, Peter Maloney, Moïse Bendayan, 1993-09-24 For this new edition the chapters on photography and the electron microscope have been completely rewritten and two new chapters have been added on immuno electron microscopy using colloidal gold and on useful specialized techniques

Immuno-Gold Electron Microscopy in Virus Diagnosis and Research Alexander D. Hyatt, Bryan Eaton, 1992-11-10 This book presents a wide variety of immuno gold techniques for use in virus diagnosis and research Protocols are presented for state of the art techniques including in situ hybridization freeze substitution and the utilization of ultra small probes and replicas for use by virologists and electron microscopists identifying and studying viruses their components and replication in cells The procedures are described by eminent scientists and are pertinent to both experienced researchers and newcomers to this field who are interested in the localization of low antigenic mass structures

*Radiative Decay Engineering* Chris D. Geddes, Joseph R. Lakowicz, 2007-12-11 During recent years our enthusiasm for Radiative Decay Engineering RDE has continually increased Many of the early predictions have been confirmed experimentally We see numerous applications for RDE in biotechnology clinical assays and analytical chemistry While implementation of RDE is relatively simple understanding the principles of RDE is difficult The concepts are widely

distributed in the optics and chemical physics literature often described in terms difficult to understand by biophysical scientists RDE includes chapters from the experts who have studied metal particle optics and fluorophore metal interactions This collection describes the fundamental principles for the widespread use of radiative decay engineering in the biological sciences and nanotechnology

**Diagnosis of Plant Virus Diseases** R. E. F. Matthews, 2019-07-23 Diagnosis of Plant Virus Diseases presents a comprehensive summary of methods currently available for the diagnosis of plant diseases caused by viruses and viroids Up to date literature references are provided brief accounts of the basis for particular methods are included and detailed protocols are presented Procedures discussed include the use of host plants electron microscopy of in vitro preparations serological procedures especially forms of ELISA monoclonal antibodies serological specific electron microscopy and immunoblotting and nucleic acid hybridization procedures Strategies are outlined for implicating virus like pathogens as causes of diseases of unknown etiology and problems involved in identifying complexes of transmission dependent and helper viruses are discussed The book will be extremely useful for phytopathologists plant virologists and research students and workers in plant virology laboratories and diagnostic plant pathology laboratories
