Class Groups And Picard Groups Of Group Rings And Orders:

Class Groups and Picard Groups of Group Rings and Orders Irving Reiner, 1976-12-31 The aim of the lectures is to provide an introduction to recent developments in the theory of class groups and Picard groups The techniques employed come from the three main areas algebraic number theory representation theory of algebras and orders and algebraic K theory

Group Rings and Class Groups K.W. Roggenkamp, M.J. Taylor, 2012-12-06 The first part of the book centers around the isomorphism problem for finite groups i.e. which properties of the finite group G can be determined by the integral group ring $\mathbb{Z}G$ The authors have tried to present the results more or less self-contained and in as much generality as possible concerning the ring of coefficients In the first section the class sum correspondence and some related results are derived This part is the proof of the subgroup rigidity theorem Scott Roggenkamp Weiss which says that a finite subgroup of the p -adic integral group ring of a finite p -group is conjugate to a subgroup of the finite group A A counterexample to the conjecture of Zassenhaus that group basis are rationally conjugate is presented in the semilocal situation Scott Roggenkamp To this end an extended version of Clifford theory for p -adic integral group rings is presented Moreover several examples are given to demonstrate the complexity of the isomorphism problem The second part of the book is concerned with various aspects of the structure of rings of integers as Galois modules It begins with a brief overview of major results in the area thereafter the majority of the text focuses on the use of the theory of Hopf algebras It begins with a thorough and detailed treatment of the required foundational material and concludes with new and interesting applications to cyclotomic theory and to elliptic curves with complex multiplication Examples are used throughout both for motivation and also to illustrate new ideas
