Summary

NotebookLM is an innovative AI tool that leverages the power of language models to analyze and understand your personal documents, effectively acting as a virtual research assistant. Unlike traditional chatbots, NotebookLM allows you to "ground" the model in your specific notes and sources, creating a personalized AI that is familiar with your unique information. This grounding enables NotebookLM to provide summaries of your documents, answer questions related to their content, and even generate creative ideas based on the information you provide. For instance, a medical student could use NotebookLM to create a glossary of terms from a scientific article, while an author could ask it to summarize interactions between two historical figures based on their research notes.

NotebookLM is an experimental product designed to use the power and promise of language models paired with your existing content to gain critical insights, faster. Think of it as a virtual research assistant that can summarize texts, explain complex ideas, and facilitate new connections — all based on the sources you select.

A key difference between NotebookLM and traditional AI chatbots is that NotebookLM lets you "ground" the language model in your notes and sources. Source grounding effectively creates a personalized AI that's versed in the information relevant to you. Starting today, you can ground NotebookLM in specific Google Docs that you choose, and we'll be adding additional formats soon.

Once you've selected your Google Docs, you can do three things:

Get a summary: When you first add a Google Doc into NotebookLM, it will automatically generate a summary, along with key topics and questions to ask as you get a better understanding of the material.

Ask questions: When you're ready for a deeper dive, you can ask questions about the documents you've uploaded. For example:

A medical student could upload a scientific article about neuroscience and ask NotebookLM to "create a glossary of key terms related to dopamine."

An author working on a biography could upload research notes and ask a question like "Summarize all the times Mueller and Carter Doyle interacted."

Generate ideas: NotebookLM isn't just for Q&A. We've found some of its more delightful and useful capabilities are when it's able to help people come up with creative new ideas. For example:

A content creator could upload their ideas for new videos and ask "Generate a script for a short video on this topic."

Or an entrepreneur raising money could upload their pitch and ask, "What questions would potential investors ask?"

AI speech synthesis is getting so good that it's hard to tell what is real and what isn't. It's odd, weird, cool, scary. But is it really useful?

This new generator created by Google and rolled out in the experimental Notebook LM app can make a very realistic sounding podcast that is actually interesting to listen to. Due to the fact that I worked with Notebook LM
