Calmodulin and Intracellular Ca⁺⁺ Receptors Shiro Kakiuchi, Hiroyoshi Hidaka, Anthony R. Means, 1982-09

Molecular Aspects of G Protein-coupled Receptors Francisco Ciruela, Rafael Luján, 2008 In the recent years studies based on two hybrid screens proteomic biochemical and cell biology approaches have shown that intracellular domains of G protein coupled receptors GPCR or heptaspanning membrane receptors HSMRs interact with intracellular proteins These interactions are the basis of a protein network associated to these receptors which includes scaffolding proteins containing one or several PDZ post synaptic density 95 discs large zona occludens 1 domains signalling proteins and proteins of the cytoskeleton The present book is focused on the emerging evidence for interactions of G protein coupled receptors with scaffolding cytoskeletal and signalling proteins that will play a role in the targeting anchoring and functioning of these receptors in the plasma membrane thus contributing to cell development and plasticity

Calcium Regulation of Cellular Function, 2000-04-01 Volume 30 examines the prominent role of calcium as an intracellular second messenger Leading investigators review a wide variety of studies on how calcium enters and moves through cells how it interacts with its many binding proteins and how calcium and its intracellular receptor calmodulin control vital cellular processes Coverage includes a detailed analysis of the mechanisms by which calcium bound to calmodulin regulates contractile proteins in smooth muscle cells Close attention is given to the roles of calcium and calmodulin dependent protein kinases and phosphatases in synaptic signal transduction protein synthesis gene expression programmed cell death activation of T lymphocytes and control of cell division cycles Other chapters discuss studies using genetically manipulable nonmammalian organisms to further probe the functions of calcium and calmodulin

Receptor Activation by Antigens, Cytokines, Hormones, and Growth

Factors David Naor, 1995 Upon ligand binding cell surface receptors transmit activity signals into the cell activating multiple metabolic and mitogenic pathways Although the nature of the stimulatory molecules is infinitely varied the principles involved in propagating the signals are ubiquitous Thus such different stimulators as antigens cytokines hormones and growth factors use similar transduction principles including ligand induced receptor internalisation of receptor ligand complexes activation of G proteins oligomerisation increases in Ca^{2+} uptake activation of tyrosine kinases or other kinases and phosphatases protein phosphorylation or dephosphorylation and the triggering of oncogenes and transcription factors The signalling molecules interact with each other through universal zippers such as SH2 and SH3 domains This volume integrates the work of the most significant contributors to the field in elucidating the mechanisms involved in these signal transduction pathways
