Calendar Of The Correspondence Of Sir John Herschel:

A Calendar of the Correspondence of Sir John Herschel Michael J. Crowe, David R. Dyck, James J. Kevin, 1998 This volume provides for the first time summaries descriptions and documentation for 14 815 letters written by or sent to Sir John Herschel 1792 1871 Herschel s numerous contributions to astronomy as well as to mathematics physics chemistry especially photochemistry and photography meteorology philosophy of science and scientific organization led his British contemporaries to regard him as the most prominent scientist of his era Because Herschel corresponded on a remarkable array of topics and with leading figures both in Britain and beyond this volume gives scholars access to a wealth of revealing new information The many new uses of the volume are enhanced by its Biographical Register which identifies about 1500 of Herschel s correspondents and its Index which supplies 30 000 references This volume is far and away the most extensive source of information on John Herschel ever published Also included are bibliographies of Herschel s publications and of publications on him

Letters and Papers of Sir John Herschel Michael J. Crowe, Paul Kesaris, 1990 [John Herschel's Cape Voyage](#) Steven Ruskin, 2017-09-08 In 1833 John Herschel sailed from London to Cape Town southern Africa to undertake at his own expense an astronomical exploration of the southern heavens as well as a terrestrial exploration of the area around Cape Town After his return to England in 1838 and as a result of his voyage he was highly esteemed and became Britain s most recognized man of science In 1847 his southern hemisphere astronomical observations were published as the Cape Results The main argument of Ruskin s book is that Herschel s voyage and the publication of the Cape Results in addition to their contemporary scientific importance were also significant for nineteenth century culture and politics In this book it is demonstrated that the reason for Herschel s widespread cultural renown was the popular notion that his voyage to the Cape was a project aligned with the imperial ambitions of the British government By leaving England for one of its colonies and pursuing there a significant scientific project Herschel was seen in the same light as other British men of science like James Cook and Richard Lander who had also undertaken voyages of exploration and discovery at the behest of their nation It is then demonstrated that the production of the Cape Results in part because of Herschel s status as Britain s scientific figurehead was a significant political event Herschel s decision to journey to the Cape for the purpose of surveying the southern heavens was of great significance to almost all of Britain and much of the continent It is the purpose of this book to make a case for the scientific cultural and political significance of Herschel s Cape voyage and astronomical observations as a means of demonstrating the relationship of scientific practice to broader aspects of imperial culture and politics in the nineteenth century *Kew Observatory and the Evolution of Victorian Science, 1840-1910* Lee T. Macdonald, 2018-06-05 Kew Observatory was originally built in 1769 for King George III a keen amateur astronomer so that he could observe the transit of Venus By the mid nineteenth century it was a world leading center for four major sciences geomagnetism meteorology solar physics and standardization Long before government cutbacks forced its closure in 1980

the observatory was run by both major bodies responsible for the management of science in Britain first the British Association for the Advancement of Science and then from 1871 the Royal Society Kew Observatory influenced and was influenced by many of the larger developments in the physical sciences during the second half of the nineteenth century while many of the major figures involved were in some way affiliated with Kew Lee T Macdonald explores the extraordinary story of this important scientific institution as it rose to prominence during the Victorian era His book offers fresh new insights into key historical issues in nineteenth century science the patronage of science relations between science and government the evolution of the observatory sciences and the origins and early years of the National Physical Laboratory once an extension of Kew and now the largest applied physics organization in the United Kingdom [History of Astronomy](#) John Lankford,2013-03-07 This Encyclopedia traces the history of the oldest science from the ancient world to the space age in over 300 entries by leading experts **The Age of Scientific Naturalism** Michael S Reidy,2015-07-28 The essays in this volume focus on the way Victorian Physicist John Tyndall and his correspondents developed their ideas through letters periodicals and journals and challenge assumptions about who gained authority and how they attained and defended their position within the scientific community *The Catalogue of the Herschel Library* Sydney Ross,2001 [The Philosophical Breakfast Club](#) Laura J. Snyder,2012-01-17 A fascinating book about the way four geniuses at Cambridge University revolutionized modern science Newsweek The Philosophical Breakfast Club recounts the life and work of four men who met as students at Cambridge University Charles Babbage John Herschel William Whewell and Richard Jones Recognizing that they shared a love of science as well as good food and drink they began to meet on Sunday mornings to talk about the state of science in Britain and the world at large Inspired by the great 17th century scientific reformer and political figure Francis Bacon another former student of Cambridge the Philosophical Breakfast Club plotted to bring about a new scientific revolution And to a remarkable extent they succeeded even in ways they never intended Historian of science and philosopher Laura J Snyder exposes the political passions religious impulses friendships rivalries and love of knowledge and power that drove these extraordinary men Whewell who not only invented the word scientist but also founded the fields of crystallography mathematical economics and the science of tides Babbage a mathematical genius who invented the modern computer Herschel who mapped the skies of the Southern Hemisphere and contributed to the invention of photography and Jones a curate who shaped the science of economics were at the vanguard of the modernization of science This absorbing narrative of people science and ideas chronicles the intellectual revolution inaugurated by these men one that continues to mold our understanding of the world around us and of our place within it Drawing upon the voluminous correspondence between the four men over the fifty years of their work Laura J Snyder shows how friendship worked to spur the men on to greater accomplishments and how it enabled them to transform science and help create the modern world The lives and works of these men come across as fit for Masterpiece Theatre Wall Street Journal Snyder succeeds famously in evoking the

excitement variety and wide open sense of possibility of the scientific life in 19th century Britain splendidly evoked in this engaging book *American Scientist* This fine book is as wide ranging and anecdotal as excited and exciting as those long ago Sunday morning conversations at Cambridge The Philosophical Breakfast Club forms a natural successor to Jenny Uglow's *The Lunar Men* and Richard Holmes's *The Age of Wonder* Washington Post

Galactic Encounters William Sheehan, Christopher J. Conselice, 2014-09-17 Written by William Sheehan a noted historian of astronomy and Christopher J Conselice a professional astronomer specializing in galaxies in the early universe this book tells the story of how astronomers have pieced together what is known about the vast and complicated systems of stars and dust known as galaxies The first galaxies appeared as violently disturbed exotic objects when the Universe was only a few 100 million years old From that tortured beginning they have evolved through processes of accretion merging and star formation into the majestic spirals and massive ellipticals that dominate our local part of the Universe This of course includes the Milky Way to which the Sun and Solar System belong it is our galactic home and the only galaxy we will ever know from the inside Sheehan and Conselice show how astronomers understanding has grown from the early catalogs of Charles Messier and William Herschel developed through the pioneering efforts of astronomers like E E Barnard V M Slipher Henrietta Leavitt Edwin Hubble and W W Morgan and finally is reaching fruition in cutting edge research with state of the art instruments such as the Hubble Space Telescope that can see back to nearly the beginning of the Universe By combining archival research that reveals fascinating details about the personalities rivalries and insights of the astronomers who created extragalactic astronomy with the latest data gleaned from a host of observations the authors provide a view of galaxies and their place in our understanding of the Universe as they have never been seen before

Journal for the History of Astronomy, 2000 The Victorian Amateur Astronomer Allan Chapman, 1998 This is the first book to look in detail at amateur astronomy in Victorian Britain It deals with the technical issues that were active in Victorian astronomy and reviews the problems of finance patronage and the dissemination of scientific ideas It also examines the relationship between the amateur and professional in Britain It contains a wealth of previously unpublished biographical and anecdotal material and an extended bibliography with notes incorporating much new scholarship In *The Victorian Amateur Astronomer* Allan Chapman shows that while on the continent astronomical

research was lavishly supported by the state in Britain such research was paid for out of the pockets of highly educated wealthy gentlemen the so called Grand Amateurs It was these powerful individuals who commissioned the telescopes built the observatories ran the learned societies and often stole discoveries from their state employed colleagues abroad In addition to the Grand Amateurs Victorian Britain also contained many self taught amateurs Although they belonged to no learned societies these people provide a barometer of the popularity of astronomy in that age In the late 19th century the comfortable middle classes clergymen lawyers physicians and retired military officers took to astronomy as a serious hobby They formed societies which focused on observation lectures and discussions and it was through this medium that women first came to play a significant role in British astronomy Readership Undergraduate and postgraduate students studying the history of science or humanities professional historians of science engineering and technology particularly those with an interest in astronomy the development of astronomical ideas scientific instrument makers and amateur astronomers
