Designing Instruction with Generative AI Brent A. Anders, 2025-09-16 Designing Instruction with Generative AI offers a novel set of tools and strategies for leveraging generative AI to create engaging and personalized learning experiences. While instructional designers are a tremendous asset to higher education, not all colleges or universities have the robust staff needed to support all instructors on staff or large student populations. Drawing on a wealth of research, professional experience, and strategic insights, this book equips new and seasoned teaching faculty and trainers with step-by-step directions on how freely accessible artificial intelligence software can assist with all aspects of the course creation and instruction process and cater to the needs of diverse learners. Each chapter offers forward thinking and empirically validated ways to help faculty create and improve instructional materials, course design, and learning environments while supporting their digital literacies. Rather than introduce AI as a means of outsourcing subject area expertise, critical thinking, or cognitive processes, the author instead emphasizes its potential to build on traditionally honed knowledge and foundational instructional design practices. From optimizing course alignment and accessibility practices to fostering active learning, motivation, and engagement, educators will find new solutions to common teaching and learning challenges with greater efficiency in time and capacity. The Open Access version of this book is available at <http://www.taylorfrancis.com> and has been made available under a Creative Commons Attribution Non-Commercial No Derivatives CC BY-NC-ND 4.0 license. **Effective**

Computer Science Education in K-12 Classrooms Kert, Serhat Bahadır, 2024-12-13 The growing influence of information technologies in everyday life has underscored the increasing importance of computer science education. The goal of computer science education is not merely to teach students how to code but to develop individuals with strong problem-solving abilities. Pedagogy-driven concepts such as computational thinking and computational participation highlight the problem-solving dimension of computer science and are shaping learning approaches worldwide. Effective instructional design is critical for environments where these concepts are taught. The proposed book, *Effective Computer Science Education in K-12 Classrooms*, aims to offer a scientific and holistic instructional roadmap for educators at the K-12 level. By detailing concrete educational approaches, this book will provide valuable insights and strategies to enhance the quality and efficiency of computer science education. It will serve as a guide for educators seeking to develop content and teaching methods that are both pedagogically sound and highly effective in building problem-solving skills among students. **AI-Driven Volunteer Selection** Jesko

Elsner, 2015-03-03 In case of medical emergency situations, a Volunteer Notification System aims to alarm potential helpers who can arrive at the victim fast enough to provide cardiopulmonary resuscitation until the professional EMS arrive on scene. A simplistic solution for selecting the corresponding volunteers is described by a so-called notification radius, i.e., alarming any volunteer with a geographic location that is within a maximum distance from the victim. Whilst the actual geographical distance is an important parameter to be considered, this work will illustrate that various additional decision parameters are

of importance and elaborate an AI driven volunteer selection system to increase the reliability and efficiency of occurring notifications
