Why Race Matters Michael E. Levin,1997 Opposing the denial of race differences and the claim that they do not matter anyway Michael Levin explains why these differences do matter He summarizes what has been written about the differences in intelligence and temperament and more important explores their larger significance He rejects charges that biological explanations of behavior are reductivist or determinist and he explains the circularity of explaining culture in terms of culture Levin s naturalistic outlook finds no group superior and predicts moral divergence among groups evolving in different environments With logical rigor Levin addresses conceptual issues not touched upon in previous hereditarian work drawing striking conclusions about justice race consciousness affirmative action individualism and private and state action Scholars

researchers policymakers and the reading public concerned with issues of race relations social philosophy contemporary moral problems and the psychology of race differences will find the book provocative No one making an effort to think clearly about race can ignore Why Race Matters

Organizations as Complex Systems Maurice Yolles, 2006 Managing the Complex is an ambitious title and it would be an audacious one if we were not to begin with a frank admission to date few to none of us have a skill set which includes managing the complex We try various things we write about others and we wonder about still others When a tool perspective or technique comes along which seems to evoke success we emulate it probe it and recoil at the all too often admission that it was situation and context which afforded success its opportunity and not some quality intrinsic to the tool perspective or technique Indeed if the study of complexity has done anything for managers and for those who espouse managerial theory it is in providing a scientific foundation for the notion that context matters Those who preach abstract ideas have then to reconcile themselves to the notion that situation and embodiment matters Those who believe in strong causality and determinism are left to wrestle with the role of chance uncertainty and chaos Those who prefer to argue that men move history are confronted with the role of environment and affordances while those who argue the reverse are left to contend with charisma irrationality of crowds and the strange qualities we know as emotions A series on complex systems has less ambitious goals to contend with than this Such a series can deal with classifications and categories and speak of noise as if it were not the central focus of the problem Managing the complex is about managing noise or perhaps we should say it is about dealing with accepting making room for and learning from noise The articles in this volume and in volumes to come will each be considered as noise by some and as gems by others but we hope that practicing managers and academics alike will find plenty of fuel to drive their personal explorations into understanding and perhaps even managing the complex
