Landscape: Pattern, Perception and Process Simon Bell, 2012-11-27 Landscapes develop and evolve through an interacting series of processes climatic geological ecological and cultural over varying periods of time These processes shape the structure and character of the landscapes which we experience Over time distinctive patterns emerge ranging in scale from the distribution of small plants to the sculptured sides of a huge canyon Our perception of these patterns goes beyond just their visual appreciation beautiful though they may be into a richer understanding of how we experience our environment By understanding this complex pattern process interaction we can obtain a deeper awareness of landscape and our place in it as inhabitants and as shapers The book explores the nature of patterns and ways of classifying them before studying the nature of perception primarily visual but including other senses then proceeds to relate this perception to aesthetics and from there to the design process From this point the main driving processes in landscape are introduced alongside the resulting patterns these being climatic landform ecosystem and cultural aspects It is this integrative approach of looking at landscape as a kind of self organising system overlaid by conscious human planning activities and the unity of pattern and process which makes this book unique Landscape draws from a wide range of neighbouring disciplines of which the landscape planner or designer needs to be aware but which are often taught as distinct elements Bell binds these fundamentals together which enables the landscape to be read and this reading to be used as the basis for planning and design This second edition updates and refreshes the original material with added sections and new photos particularly making use of the developments in satellite photography Featuring full colour throughout this textbook is ideal for anyone studying landscape architecture or any of the disciplines which intersect with the landscape and which affect it

Landscape Simon Bell, 1999 Providing a fresh approach to the theory of design Landscape Pattern Perception and Process synthesizes planning design and ecology and shows a new view of where design can develop The book brings together the work and subject areas of a range of disciplines including psychologists philosophers geologists ecologists cultural geographers foresters urban planners and landscape architects and synthesizes all these together Since many landscape and environmental problems require multi disciplinary approaches for their solution this book demonstrates how the best integration can be achieved Highly illustrated it contains examples from North America Canada Europe and Australasia Glossary references and further reading provide the reader with guidance and back up resources
