Business Component Factory Peter Herzum, Oliver Sims, 2000-01-03 In this book Peter Herzum and Oliver Sims present a complete component based strategy the business component approach that applies and extends component thinking to all aspects of the software life cycle for enterprise systems The approach includes a conceptual framework that brings components into the world of scalable systems and outlines the different component granularities It also includes a methodology that goes beyond current object oriented practices to provide the concepts required to meet the real challenges of component based development Using their business component approach the authors then provide a blueprint for a business component factory a development capability that can produce software with the quality speed and flexibility needed to match changing business needs Sprinkled with guidelines tips and architectural patterns this book fully prepares you for the approaching component revolution Praise for Business Component Factory this book should be very useful for anyone considering the daunting task of adopting component software on an enterprise scale Clemens Szyperski Microsoft Research Author of the award winning book Component Software Beyond Object Oriented Programming Herzum and Sims do an admirable job of differentiating the different component concepts allowing this clearly written book to focus on the construction of business systems by non software practitioners out of business component parts developed separately and perhaps for a commodity component marketplace This is the future of software systems and this book is a practical giant step in that direction Richard Mark Soley PhD Chairman and CEO OMG Finally a book that takes you from component design all the way down to the middleware on which they are deployed It s an important contribution to the nascent server side component discipline written by practitioners for practitioners Robert Orfali Author of Client Server Survival Guide Third Edition and Client Server Programming with Java and CORBA Second Edition both from Wiley , **Development of Component-based Information Systems** Sergio De Cesare, Mark Lycett, Robert Macredie, 2006 Annotation This work provides a comprehensive overview of research and practical issues relating to component based information systems CBIS Spanning the organizational developmental and technical aspects of the subject the original research included here provides fresh insights into successful CBIS technology and application including the selection and trading of commercial off the shelf products COTS **Component-Based Software Engineering** Michel R. V. Chaudron, Clemens Szyperski, Ralf H. Reussner, 2008-10-10 On behalf of the Organizing Committee we are pleased to present the p ceedings of the 2008 Symposium on Component Based Software Engineering CBSE CBSE is concerned with the development of software intensivesystems from independently developed software building blocks components the velopment of components and system maintenance and improvement by means of component replacement and customization CBSE 2008 was the 11th in a series of events that promote a science and technology foundation for achieving predictable quality in software systems through the use of software component technology and its associated software engineering practices Wewerefortunateto

have dedicated Program Committee comprising many internationally recognized researchers and industrial practitioners. We would like to thank the members of the Program Committee and associated reviewers for their contribution in making this conference a success. We received 70 submissions and each paper was reviewed by at least three Program Committee members, four for papers with an author on the Program Committee. The entire reviewing process was supported by the Conference Management Toolkit provided by Microsoft. In total, 20 submissions were accepted as full papers and 3 submissions were accepted as short papers.

Component-Based Software Engineering Grace A. Lewis, Iman Poernomo, Christine Hofmeister, 2009-06-18. The 2009 Symposium on Component Based Software Engineering (CBSE 2009) was the 12th in a series of successful events that have grown into the main forum for industrial and academic experts to discuss component technology. Component based software engineering (CBSE) has emerged as the underlying technology for the assembly of executable software systems. In essence, CBSE is about composing computational building blocks to construct larger building blocks that fulfill client needs. Most software engineers are involved in some form of component based development. Nonetheless, the implications of CBSE adoption are wide reaching and its challenges grow in tandem with its uptake, continuing to inspire our scientific speculation. Component based development necessarily involves elements of software architecture, modular software design, software verification, testing, configuration and deployment. This year's submissions represent a cross section of CBSE research that touches upon all these aspects. The theoretical foundations of component specification, composition, analysis and verification continue to pose research challenges. What exactly constitutes an adequate semantics for communication and composition so that bigger things can be built from smaller things? How can formal approaches facilitate predictable assembly through better analysis? We have grouped the proceedings into two sub themes that deal with these issues: component models and communication and composition. At the same time, the world is changing.
