It helps identify those factors that need to be assessed in buying computer equipment and the associated computing instructions called computer programs or software. It is a management manual and not a technical treatise on computing theory or advanced computing. The book is organized into three main parts. Part 1 helps the reader to recognize the symptoms and assess needs. It explains a method of pinpointing the specific application areas. It emphasizes the need for a computing policy within the organization, specifies some significant policy issues and identifies sources of external help. Part 2 guides the reader through the buying cycle, identifying the major activities and providing guidelines for the evaluation of the systems proposed. Part 3 explains the constituents of a computer system and provides a glossary of terms.
