Decay Heat Removal and Natural Convection in Fast Breeder Reactors Ashok K. Agrawal, James G. Guppy, 1981 Decay Heat Removal and Natural Convection in Fast Breeder Reactors, 1981* Decay Heat Removal and Natural Convection in Fast Breeder Reactors, Papers of a meeting held in 1980 sponsored by the American Nuclear Society and the Brookhaven National Laboratory Agrawal AK Ed, 1981 **Proceedings Of The International Heat Transfer Conference** Lee, 1998-11-01 This year's set of papers includes 23 Keynote Papers and 537 refereed General Papers in seven volumes. Experts from around the world have combined to address the leading edge of research and practical innovations in convection, combustion, heat exchangers, two phase flow and much more. Whether one is involved in mechanical, chemical, nuclear or energy engineering, the quantity, international scope and high quality of the contents make access to these volumes essential. **Specialists' Meeting on Decay Heat Removal and Natural Convection in LMFBRs** American Nuclear Society. Thermal Hydraulics Division, American Nuclear Society. Nuclear Reactor Safety Division, Brookhaven National Laboratory (Upton, NY), 1981 Dynamics and Control in Nuclear Power Stations British Nuclear Energy Society, 1992 This volume covers a wider view of the aspects of control of nuclear power stations by taking into consideration the plant as a whole and the protection systems employed therein. Authors with world wide experience consider all the aspects of dynamics and control in the context of both fast and thermal power stations. The topics discussed include both the methods of development and applications within analysis of plant behaviour, validation of mathematical models, plant testing, design and implementation of controls. *Applied Mechanics Reviews*, 1982 **Simulation of Decay Heat Removal by Natural Convection in a Pool Type Fast Reactor Model-ramona-with Coupled 1D/2D Thermal Hydraulic Code System**, 1995 Post shutdown decay heat removal is an important safety requirement in any nuclear system. In order to improve the reliability of this function, Liquid metal sodium cooled fast breeder reactors LMFBR are equipped with redundant hot pool dipped immersion coolers connected to natural draught air cooled heat exchangers through intermediate sodium circuits. During decay heat removal, flow through the core immersion cooler primary side and in the intermediate sodium circuits are also through natural convection. In order to establish the viability and validate computer codes used in making predictions, a 1/20 scale experimental model called RAMONA with water as coolant has been built and experimental simulation of decay heat removal situation has been performed at KfK Karlsruhe. Results of two such experiments have been compiled and published as benchmarks. This paper brings out the results of the numerical simulation of one of the benchmark cases through a 1D/2D coupled code system DHDYN 1D THYC 2D and the salient features of the comparisons. Brief description of the formulations of the codes are also included. *Status of Liquid Metal Cooled Fast Breeder Reactors* International Atomic Energy Agency, 1985 Issues in Water and Power Engineering: 2013 Edition, 2013-05-01 *Issues in Water and Power Engineering 2013 Edition* is a ScholarlyEditions book that delivers timely, authoritative and comprehensive information about Fusion.
