## **Decentralized Estimation And Control For Multisensor Systems:**

Decentralized Estimation and Control for Multisensor Systems Arthur G.O. Mutambara, 2019-05-20 Decentralized Estimation and Control for Multisensor Systems explores the problem of developing scalable decentralized estimation and control algorithms for linear and nonlinear multisensor systems Such algorithms have extensive applications in modular robotics and complex or large scale systems including the Mars Rover the Mir station and Space Shuttle Columbia Most existing algorithms use some form of hierarchical or centralized structure for data gathering and processing In contrast in a fully decentralized system all information is processed locally A decentralized data fusion system includes a network of sensor nodes each with its own processing facility which together do not require any central processing or central communication facility Only node to node communication and local system knowledge are permitted Algorithms for decentralized data fusion systems based on the linear information filter have been developed obtaining decentrally the same results as those in a conventional centralized data fusion system However these algorithms are limited indicating that existing decentralized data fusion algorithms have limited scalability and are wasteful of communications and computation resources Decentralized Estimation and Control for Multisensor Systems aims to remove current limitations in decentralized data fusion algorithms and to extend the decentralized principle to problems involving local control and actuation The text discusses Generalizing the linear Information filter to the problem of estimation for nonlinear systems Developing a decentralized form of the algorithm Solving the problem of fully connected topologies by using generalized model distribution where the nodal system involves only locally relevant states Reducing computational requirements by using smaller local model sizes Defining internodal communication Developing estima

**Multisensor Fusion: A Minimal Representation Framework** Rajive Joshi, Arthur C Sanderson, 1999-12-13 The fusion of information from sensors with different physical characteristics such as sight touch sound etc enhances the understanding of our surroundings and provides the basis for planning decision making and control of autonomous and intelligent machines The minimal representation approach to multisensor fusion is based on the use of an information measure as a universal yardstick for fusion Using models of sensor uncertainty the representation size guides the integration of widely varying types of data and maximizes the information contributed to a consistent interpretation In this book the general theory of minimal representation multisensor fusion is developed and applied in a series of experimental studies of sensor based robot manipulation A novel application of differential evolutionary computation is introduced to achieve practical and effective solutions to this difficult computational problem
