Decision Tables And Computer Programming:

Decision Tables in Software Engineering Richard B. Hurley, 1983 When one thinks of programming one thinks of programming languages and lines of coding The principles of decision table programming however require very little in the way of coding and language details In the context of software engineering the concern is with a method of problem solving treating a program in small manageable pieces and tying them together with a precise vehicle of communication This book attempts to teach what decision tables are and how to formulate and manipulate them Designed for practicing programmers software designers analysts testers documenters subject matter specialists and computer users who have some programming experience There is very little mathematical content no formal mathematical background is needed *Decision Tables and Computer Programming* Ray Welland, 1981 **Decision Tables and Computer Programming** Ray Welland, **Decision Tables and Computer Programming** R. Air Force,1964 Decision tables are useful for describing a set of complex decision rules based on given sets of conditions Algorithms that can efficiently covert the tables into computer programs will extend the usefulness of decision tables to computer users This Memorandum describes two such algorithms based on work done by M S Montalbano and extended here to handle dashes and ELSE decision rules The first algorithm minimizes the computer storage space required for the resultant program the second minimizes computer running time During the conversion process both pinpoint any contradictions or redundancies among the rules in a table A necessary adjunct to minimizing computer storage or running time is the allowable reduction of the number of rules in a decision table This Memorandum describes a technique to effect this reduction for paris triplets and quadruplets of rules The system analyst will find this method most helpful for pairs and generally unprofitable for n tuples greater than three The technique can be done manually or accomplished by the computer as a prelude to executing one of the two algorithms Author
