Decision Making in Surgical Sepsis Ronald Lee Nichols, Newton E. Hyslop, John G. Bartlett, 1991      **Surgical Rounds**, 1993      *Current Catalog* National Library of Medicine (U.S.), 1992      National Library of Medicine Current Catalog National Library of Medicine (U.S.), 1992      **Decision Making in Critical Care Nursing** Susan Moore Williams, 1990

*Artificial Intelligence in Medicine and Surgery*, 2023-12-13 Human history is filled with inventions and other innovations that resulted in a significant and lasting change in our civilization's course of development. From gasoline powered vehicles to transistor based electronics or jet airplanes things we now take for granted often appeared suddenly and unexpectedly. Yet after their introduction our world changed forever. Over the past two decades artificial intelligence AI and machine learning ML have been stealthily increasing their presence in our everyday lives. This random systematic adoption process is exposing humanity to something we never previously directly faced: an intelligence that may and likely will exceed our own. Despite this most people are not fully aware of current and future benefits, limitations and threats related to AI ML. Within health care there is little awareness of what AI ML is capable of and how these new capabilities are being implemented or utilized. It is this current state that serves as our starting point in the emerging debate on AI ML in medicine and surgery including its integration, projected influence and many other considerations that are not that different from other past technology adoption paradigms. This book discusses both current trends and future developments in AI and ML across health care.

These include patient's anatomy and pathophysiology as well as the magnitude of the injury at hand, the surgeon's own physiologic and mental status, training and experience and many other factors such as creativity, leadership skills and overall biochemistry of the environment. The text reviews theoretical as well as objective information that surgeons use to make intraoperative decisions in situations often with very limited data, decisions that will decide between a patient's living or

dying such as in trauma surgery and other complex surgeries How surgeons choose one technical approach over another in these situations is covered This book fills a critical need for resource materials on these topics and includes both theoretical as well as practical presentations of many typical patients seen in operating rooms around the world Surgical Decision Making Beyond the Evidence Based Surgery is written by academic and clinical practicing surgeons that face intraoperative decision situations on a daily basis and therefore provides a unique and valuable resource in the field for surgeons currently in training and for those already in clinical or research practice
