Decisions Uncertainty The Brain The Sc:

Decision Making under Uncertainty Kerstin Preuschoff, Peter N. C. Mohr, Ming Hsu, 2015-06-16 Most decisions in life are based on incomplete information and have uncertain consequences To successfully cope with real life situations the nervous system has to estimate represent and eventually resolve uncertainty at various levels A common tradeoff in such decisions involves those between the magnitude of the expected rewards and the uncertainty of obtaining the rewards For instance a decision maker may choose to forgo the high expected rewards of investing in the stock market and settle instead for the lower expected reward and much less uncertainty of a savings account Little is known about how different forms of uncertainty such as risk or ambiguity are processed and learned about and how they are integrated with expected rewards and individual preferences throughout the decision making process With this Research Topic we aim to provide a deeper and more detailed understanding of the processes behind decision making under uncertainty Handbook of Reward and Decision Making Jean-Claude Dreher, Léon Tremblay, 2009-06-04 This book addresses a fundamental question about the nature of behavior how does the brain process reward and makes decisions when facing multiple options The book presents the most recent and compelling lesion neuroimaging electrophysiological and computational studies in combination with hormonal and genetic studies which have led to a clearer understanding of neural mechanisms behind reward and decision making The neural bases of reward and decision making processes are of great interest to scientists because of the fundamental role of reward in a number of behavioral processes such as motivation learning and cognition and because of their theoretical and clinical implications for understanding dysfunctions of the dopaminergic system in several neurological and psychiatric disorders schizophrenia Parkinson's disease drug addiction pathological gambling Comprehensive coverage of approaches to studying reward and decision making including primate neurophysiology and brain imaging studies in healthy humans and in various disorders genetic and hormonal influences on the reward system and computational models Covers clinical implications of process dysfunction e.g. schizophrenia Parkinson's disease eating disorders drug addiction pathological gambling Uses multiple levels of analysis from molecular mechanisms to neural systems dynamics and computational models This is a very interesting and authoritative handbook by some of the most outstanding investigators in the field of reward and decision making Professor Edmund T Rolls Oxford Center for Computational Neuroscience UK

Opportunities in Neuroscience for Future Army Applications National Research Council, Division on Engineering and Physical Sciences, Board on Army Science and Technology, Committee on Opportunities in Neuroscience for Future Army Applications, 2009-06-16 Advances and major investments in the field of neuroscience can enhance traditional behavioral science approaches to training learning and other applications of value to the Army Neural behavioral indicators offer new ways to evaluate how well an individual trainee has assimilated mission critical knowledge and skills and can also be used to provide feedback on the readiness of soldiers for combat Current methods for matching individual capabilities with the

requirements for performing high value Army assignments do not include neuropsychological psychophysiological neurochemical or neurogenetic components simple neuropsychological testing could greatly improve training success rates for these assignments Opportunities in Neuroscience for Future Army Applications makes 17 recommendations that focus on utilizing current scientific research and development initiatives to improve performance and efficiency collaborating with pharmaceutical companies to employ neuropharmaceuticals for general sustainment or enhancement of soldier performance and improving cognitive and behavioral performance using interdisciplinary approaches and technological investments An essential guide for the Army this book will also be of interest to other branches of military national security and intelligence agencies academic and commercial researchers pharmaceutical companies and others interested in applying the rapid advances in neuroscience to the performance of individual and group tasks **Honeybee Democracy** Thomas D.

Seeley,2010-09-20 How honeybees make collective decisions and what we can learn from this amazing democratic process Honeybees make decisions collectively and democratically Every year faced with the life or death problem of choosing and traveling to a new home honeybees stake everything on a process that includes collective fact finding vigorous debate and consensus building In fact as world renowned animal behaviorist Thomas Seeley reveals these incredible insects have much to teach us when it comes to collective wisdom and effective decision making A remarkable and richly illustrated account of scientific discovery Honeybee Democracy brings together for the first time decades of Seeley's pioneering research to tell the amazing story of house hunting and democratic debate among the honeybees In the late spring and early summer as a bee colony becomes overcrowded a third of the hive stays behind and rears a new queen while a swarm of thousands departs with the old queen to produce a daughter colony Seeley describes how these bees evaluate potential nest sites advertise their discoveries to one another engage in open deliberation choose a final site and navigate together as a swirling cloud of bees to their new home Seeley investigates how evolution has honed the decision making methods of honeybees over millions of years and he considers similarities between the ways that bee swarms and primate brains process information He concludes that what works well for bees can also work well for people any decision making group should consist of individuals with shared interests and mutual respect a leader's influence should be minimized debate should be relied upon diverse solutions should be sought and the majority should be counted on for a dependable resolution An impressive exploration of animal behavior Honeybee Democracy shows that decision making groups whether honeybee or human can be smarter than even the smartest individuals in them Well-Founded Kelly Lambert,2018-09-25 A neuroscientist reveals unique aspects of decision making and the best strategies for protecting and enhancing the brain's ability to navigate life's uncertainties Contingency calculations the ability to predict the outcomes of decisions and actions are critical for survival and success Our amazing brains continually process past and current experiences to enable us to make the most adaptive choices But when the brain's information systems are compromised by such varying conditions as drug addiction poverty mental illness or even

privilege we can lose the ability to arrive at informed decisions In this engaging book behavioral neuroscientist Kelly Lambert explores a variety of the modern factors that can lead to warped neural processing or distorted realities she terms brain bubbles Individuals who define success in terms of creature comforts and immediate gratification for instance may interact less with the physical and social world and thereby dull their ability to imagine varied contingency scenarios The author underscores how continuous meaningful and well grounded experiences are required if we are to make the best decisions throughout our lives

Decision-Making Experiments under a Philosophical Analysis: Human Choice as a Challenge for Neuroscience Gabriel José Corrêa Mograbi, Carlos Eduardo Batista de Sousa, 2015-10-15 This introduction just aims to be a fast foreword to the special topic now turned into an e book The Editorial Decision Making Experiments under a Philosophical Analysis Human Choice as a Challenge for Neuroscience alongside with my opinion article Neuropsychological considerations on decision making Pushing up the frontiers without disregarding their foundations play the real role of considering in more details the articles and the whole purpose of this e book What I must highlight in this foreword is that our intention with such a project was to deepen into the very foundations of our current paradigms in decision neuroscience and to philosophically moot its foundations and repercussions Normal Science a term coined by Philosopher Thomas Kuhn works under a research consensus among a scientific community A shared paradigm consolidated methods widespread convictions Pragmatically winning formulas must be kept although not at any cost What differentiates a gifted and revolutionary scientist from a more bureaucratic colleague is the capacity and willingness of constantly reevaluating depurating and refining his her own paradigm That is best strategy to avoid that a paradigm itself would gradually come under challenge In my view some achievements in this sense were brought about in our project The e book will be inspiring and informative for both neuroscientists that are concerned with the very foundations of their works and for philosophers that are not blind to empirical evidence Kant once said Thoughts without content are empty intuitions without concepts are blind Paraphrasing Kant we could say Philosophy without science is empty science without philosophy is blind

 In the situation that finds us the road most travelled is that which we all know best and which makes us most comfortable
 It often is the pathway that brings us to excessive waste unrecyclable materials and fuels and arrogant impositions and demands upon communities and surroundings all in the name of our commodity
 We have come to use the word globalisation to mean in the minds of many imposing of my way because you are still ignorant of the best way which is my way of course
 hence it is my responsibility duty and intent to educate you to my way
 Certainly this is a rash generalisation which we will need to address and rectify in the course of this monograph
 It nevertheless shines the light unto why in many instances the road most travelled is one of unsustainable behaviours decisions and actions in the short and long term
 By contrast the road less travelled actually the road most often not taken is that which seeks valid viable and sustainable solutions for the betterment of the individual local communities societies cultures regions
