Decommissioning Nuclear Power Plants Frederick Frankena, 1986 **Nuclear Politics in America** Robert J. Duffy, 1997 Duffy's work traces nuclear politics from the creation of a powerful subgovernment through the public lobby reforms of the late 1960s and early 1970s and the deregulatory backlash of the Reagan years He demonstrates that while policies did change in the 1970s they did not change as much as other accounts have suggested and that the industry continued to receive considerable federal support The book is particularly significant for extending the discussion of nuclear policy through the Bush and Clinton years including the controversy over waste disposal new licensing procedures enacted in the 1992 Amendments to the Atomic Energy Act and the effects of deregulation of electric utilities Amazon.com viewed August 24 2020 **Wind Energy for Power Generation** K. the world from a variety of perspectives The first major section of the book provides a step by step account of the accident itself beginning with the special testing that eventually led to the disaster Included are data on the daily release of radioactivity from Chernobyl from April 25 to May 7 the maximum reported radiation levels in Europe following the accident and the estimated direct financial losses in the Soviet Union resulting from the incident The Political Fallout section examines public opposition to nuclear power in various countries It provides a summary of both the citizen responses such as protests demonstrations and petitions and the political responses that followed the accident Other sections examine the safety of nuclear power in general and the possible effects of Chernobyl on the once held vision of a nuclear powered world Major adjustments in policy are traced in selected countries since 1980 and examples of governmental decisions to reduce or eliminate nuclear power are discussed TW **Technology, Whose Costs?-- Whose Benefits?** Institute of Electrical and Electronics Engineers,1993 Small Press Record of Books in Print ,1992 **New Regulatory and Management**

Alternatives to the Automobile Marcia D. Lowe,1990 The numerous and widespread problems associated with the automobile are discussed Traffic congestion air pollution and oil dependence are some of the reasons why the use of alternative fuels is necessary A proposal is made for a new transport environment where walking bicycling and public transportation are used to complement the use of the automobile Gradual restructuring of cities and suburbs to make alternatives viable and to lessen the need for driving is also discussed Chapters include 1 From Servant to Master 2 Getting on Track 3 Cities for People 4 The Road Not Taken and 5 A Policy Overhaul KR **The Global Politics of Abortion** Jodi L. Jacobson,1990 Locating the issue of abortion in a global public policy context with the array of public health human rights and social questions that are implicated is the aim of this paper Abortion laws around the world have been liberalized since the 1950s with a resultant decrease in abortion related mortality among women The proportion of the world s population governed by laws that permit abortion on medical or broader social and economic grounds is 75 percent nearly 4 billion people In addition to women living in those countries that have resisted liberalization of their abortion laws many women have restricted access to abortion even those in countries in which abortion is technically legal There are a number of reasons for this including a lack of government or public commitment to provide or fund services lack of trained specialists administrative roadblocks a woman s ability to pay and a lack of truthful information about legal rights and services Abortion rates from countries around the world are examined and discussed in terms of the varying demographic and social realities The large number of maternal deaths due to abortion that still occur is not due to a deficiency in technology but a deficiency in the value placed on women s lives The numerous roadblocks to safe abortion services drive women to seek illegal or clandestine abortions that greatly endanger their lives The debate surrounding abortion has been too often portrayed as a conflict between black and white hues The debate needs to take place in a larger context complete with public health family

planning and human rights concerns Equality of political rights for women and likely the lives of many hinges on political decisions regarding abortion DB **Apartheid's Environmental Toll** Alan Thein Durning,1990 Mining Urban Wastes Cynthia Pollock Shea,1987 *The Future of Urbanization* Lester Russell Brown,Jodi L. Jacobson,1987 Aside from the growth of world population itself urbanization is the dominant demographic trend of the late twentieth century The number of people living in cities increased from six hundred million in 1950 to over two billion in 1986 If this growth continues unabated more than half of humanity will reside in urban areas shortly after the turn of the century Resultant signs of urban stress now apparent around the world call into question the continuing expansion of cities Land and water scarcity inefficient energy use and waste disposal and the resultant problems of pollution all contribute to the escalating ecological and economic costs of supporting modern cities Accelerated urbanization in the Third World has spurred the concentration of political power within cities leading to policies that favor urban over rural areas Now mounting external debts are forcing Third World governments to scale back urban subsidies just as the demand for services multiplies Today s urban areas larger and more numerous than ever have outgrown the capacity of natural and social systems to support them One way of reaching a nation s optimum rural urban balance would be for a market economy to play a more prominent role in economic development Chapters include The Growth and Role of Cities Urban Energy Needs Feeding Cities Nutrient Recycling Ecology and Economics of City Size and Seeking a Rural Urban Balance BZ Biblio-flash ,1988 *High Priorities* Derek Denniston,1995 *Budgeting for Disarmament* Michael Renner,1994 **Renewable Energy** Cynthia Pollock Shea,1988 This document presents the position that renewable energy sources offer a timely alternative to dwindling oil supplies and to environmentally damaging coal combustion although public support and financial backing need to be strengthened An expanded use of renewables and a greater commitment to energy efficiency are the most cost effective and environmentally sound approaches to mitigating many seemingly intractable problems The booklet contains specific sections on 1 harnessing the power of water 2 new uses of biomass 3 power from the sun 4 tapping the energy of the wind 5 laying the institutional groundwork for a shift to using more renewables and 6 increasing the overall energy contribution available for renewables TW **The Global Ecology Handbook** Global Tomorrow Coalition,1990 A comprehensive easy to use and practical guide on the environment and the linkages among economic development energy policy population growth and other issues as well as what we can do in our daily life to help solve today s environmental problems and improve the quality of life for everyone Includes chapters on tropical rain forests the garbage glut oceans and coasts global warming population growth agriculture biological diversity fresh water hazardous waste environment and development
