**Deductive Systems** Garth E. Runion, James R. Lockwood, 1978 This resource is devoted to finite and non Euclidean geometric systems for secondary school teachers and students

**A Course in Modern Geometries** Judith N. Cederberg, 2013-03-09 A Course in Modern Geometries is designed for a junior senior level course for mathematics majors including those who plan to teach in secondary school Chapter 1 presents several finite geometries in an axiomatic framework Chapter 2 continues the synthetic approach as it introduces Euclid's geometry and ideas of non Euclidean geometry In Chapter 3 a new introduction to symmetry and hands on explorations of isometries precedes the extensive analytic treatment of isometries similarities and affinities A new concluding section explores isometries of space Chapter 4 presents plane projective geometry both synthetically and analytically The extensive use of matrix representations of groups of transformations in Chapters 3 4 reinforces ideas from linear algebra and serves as excellent preparation for a course in abstract algebra The new Chapter 5 uses a descriptive and exploratory approach to introduce chaos theory and fractal geometry stressing the self similarity of fractals and their generation by transformations from Chapter 3 Each chapter includes a list of suggested resources for applications or related topics in areas such as art and history The second edition also includes pointers to the web location of author developed guides for dynamic software explorations of the Poincaré model isometries projectivities conics and fractals Parallel versions of these explorations are available for Cabri Geometry and Geometer's Sketchpad Judith N Cederberg is an associate professor of mathematics at St Olaf College in Minnesota

**Roads to Geometry** Edward C. Wallace, Stephen F. West, 2015-10-23 Now available from Waveland Press the Third Edition of Roads to Geometry is appropriate for several kinds of students Pre service teachers of geometry are provided with a thorough yet accessible treatment of plane geometry in a historical context Mathematics majors will find its axiomatic development sufficiently rigorous to provide a foundation for further study in the areas of Euclidean and non Euclidean geometry By using the MSG postulate set as a basis for the development of plane geometry the authors avoid the pitfalls of many foundations of geometry texts that encumber the reader with such a detailed development of preliminary results that many other

substantive and elegant results are inaccessible in a one semester course At the end of each section is an ample collection of exercises of varying difficulty that provides problems that both extend and clarify results of that section as well as problems that apply those results At the end of chapters 3-7 a summary list of the new definitions and theorems of each chapter is included
