## **Deductive Logic An Introduction To Evaluation Technique And Logical Theory:**

Deductive Logic David S. Clarke, Richard Behling, 1998 Deductive Logic is designed as an intermediate level text directed at upper division students from philosophy and the humanities Its focus is exclusively on deductive logic avoiding altogether topics such as informal reasoning and scientific method normally included in introductory logic courses Its exposition of logical topics is informal with emphasis on explaining the basic concepts and procedures of modern symbolic logic in the simplest and most intuitive manner possible rather than on developing a rigorous formal system and providing proofs of its properties The fact that the text presupposes a course offered to philosophy students and serves to introduce them to logic as the language of philosophy has strongly influenced the selection of topics The topics here are controversial and the problems not easily resolved but this text strives to relate the formal logical structures introduced to issues of philosophic interest

*Instrumental Reasoning and Systems Methodology* Richard Mattessich, 2012-12-06 This book has been written primarily for the applied and social scientist and student who longs for an integrated picture of the foundations on which his research must ultimately rest but hopefully the book may also serve philosophers interested in applied disciplines and in systems methodology If integration was the major motto the need for a methodology appropriate to the teleological peculiarities of all applied sciences was the main impetus behind the conception of the present work This need I felt a long time ago in my own area of analytical and empirical research in accounting theory and management science later I had the opportunity to teach for almost a decade graduate seminars in Methodology which offered particular insight into the methodological needs of students of such applied disciplines as business administration education engineering informatics etc Out of this effort grew the present book which among other things tries on one side to illuminate the difference and relationship between methods of cognition and methods of decision and on the other to sketch a framework suitable for depicting means end relationships in a holistic setting I believe that a systems methodology which incorporates recent endeavours of deontic logic decision theory information economics and related areas would be eminently suited to break the ground for such a future framework Yet systems theory has two major shortcomings which might prevent it from evolving into the desired methodology of applied science

*Transformational Change for People and the Planet* Juha I. Uitto,Geeta Batra,2022-01-13 This Open Access book deals with the pressing question of how to achieve transformational change that reconciles development with environmental sustainability It particularly focuses on the role of evaluation in finding sustainable solutions Environment and development are closely interlinked as are human health and ecosystem health The pandemic that began in 2020 demonstrated in no uncertain terms how destruction of habitats has allowed hitherto unknown pathogens spill over to humans wreaking havoc on people s lives and livelihoods We are already seeing the impacts of global climate change in terms of heatwaves forest fires and increased storms The Sustainable Development Goals SDGs explicitly recognize the equal importance of the social economic and environmental dimensions of development In these turbulent times when humankind faces multiple complex challenges it is essential to know that our responses are effective and that they make a positive difference Evaluation can provide invaluable lessons to how we design policies strategies and programs and how we allocate limited resources between competing priorities This book brings together key thinkers and practitioners from the public and private sectors from major multilateral organizations and from bilateral donor agencies to present the latest knowledge and experience on how to evaluate interventions in the nexus of environment and development The book does not promote any particular approach or methodology but rather emphasizes the need for mixed methods to address the question at hand in the best and most suitable manner It covers cases from a variety of fields from climate change mitigation and adaptation energy efficiency and renewable energy natural resources management biodiversity conservation and more This book is not a conference proceedings although it has its roots in the Third International Conference on Evaluating Environment and Development organized by the GEF Independent Evaluation Office in October 2019 The conference brought together a larger number of established and upcoming evaluators researchers and evaluation users from the Global North and South representing a wide variety of organizations to discuss the frontiers of environment and development evaluation Following the conference the editors identified and contacted the participants who made key contributions at the conference and asked them to develop

their ideas and papers into book chapters according to a coherent plan      **The Publishers' Trade List Annual** ,1986

*Fallacies* Hans V. Hansen, Robert C. Pinto, 2010-11 Since 1970 when Charles Hamblin issued a challenge for philosophers, logicians and educators in general to begin work anew in fallacies, a serious literature on fallacies has indeed developed. Part of this literature deals with the theory of what fallacies are; another part of it contains rigorous analyses of particular fallacies. However, most is still not readily accessible to the researcher, teacher or student of the field. As a result, the best work on fallacies is not finding its way into the classroom nor is it informing the educational and intellectual experiences available to most college and university students. A major purpose of this book is to make the post-Hamblin work on fallacies available to a wider audience in a single convenient volume. The editors have brought together for the first time the most important historical writings on fallacy theory from Aristotle to John Stuart Mill and the most recent and most important theoretical and pedagogical developments in the field since Hamblin's landmark 1970 book. All but a few of the essays included are new contributions for this anthology, and an extensive annotated bibliography is included for researchers and students of fallacies and fallacy theory      Books in Print ,1994
