offers a cross section of the issues facing the area of databases and expert systems i.e. topics of basic research interest on one hand and questions occurring when developing applications on the other. Major credit for the success of the conference goes to all of our colleagues who submitted papers for consideration and to those who have organized and chaired the panel sessions. Many persons contributed numerous hours to organize this conference. The names of most of them will appear on the following pages. In particular we wish to thank the Organization Committee Chairmen Johann Gordesch, A. Min Tjoa and Roland Wagner who also helped establishing the program. Special thanks also go to Gabriella Wagner and Anke Ruckert. Dimitris Karagiannis, General Conference Chairman, Contents Conference Committee.

Explainable Artificial Intelligence (XAI) in Healthcare Utku Kose, Nilgun Sengoz, Xi Chen, Jose Antonio Marmolejo Saucedo, 2024-04-23. This book highlights the use of explainable artificial intelligence (XAI) for healthcare problems in order to improve trustworthiness, performance and sustainability levels in the context of applications. Explainable Artificial Intelligence (XAI) in Healthcare adopts the understanding that AI solutions should not only have high accuracy performance but also be transparent, understandable and reliable from the end user's perspective. The book discusses the techniques, frameworks and tools to effectively implement XAI methodologies in critical problems of the healthcare field. The authors offer different types of solutions, evaluation methods and metrics for XAI and reveal how the concept of explainability finds a response in target problem coverage. The authors examine the use of XAI in disease diagnosis, medical imaging, health tourism, precision medicine and even drug discovery. They also point out the importance of user perspectives and value of the data used in target problems. Finally, the authors also ensure a well-defined future perspective for advancing XAI in terms of healthcare. This book will offer great benefits to students at the undergraduate and graduate levels and researchers. The book will also be useful for industry professionals and clinicians who perform critical decision making tasks.

Research and Development in Intelligent Systems XIX Alun Preece, Frans Coenen, 2012-12-06. M. A. BRAMER, University of Portsmouth, UK. This volume comprises the refereed technical papers presented at ES2002, the Twenty second SGAI International Conference on Knowledge Based Systems and Applied Artificial Intelligence, held in Cambridge in December 2002. The conference was organised by SGAI, the British Computer Society Specialist Group on Artificial Intelligence, previously known as SGES. The papers in this volume present new and innovative developments in the field, divided into sections on Machine Learning, Knowledge Representation and Reasoning, Knowledge Acquisition, Constraint Satisfaction, Scheduling and Natural Language Processing. This year's prize for the best refereed technical paper was won by a paper entitled 'Covering the Path Space: A Casebase Analysis for Mobile Robot Path Planning' by M. Kruusmaa, Department of Mechatronics, Tallinn Technical University, Estonia, and J. Willemson, Department of Computer Science, Tartu University, Estonia. SGAI gratefully acknowledges the long term sponsorship of Hewlett Packard Laboratories, Bristol, for this prize, which goes back to the 1980s. This is the nineteenth volume in the Research and Development series. The Application Stream papers are published as a companion volume under the title Applications and

Medical expert systems led the way in the first generation of expert systems so it is not surprising that medical expert systems have taken a leading role in the second generation i.e. deep expert systems The aim of this volume is to give an accurate picture of current research on Deep Model approaches directly applicable to the medical field and to present this picture in the context of recent findings Being a collection of research papers it is mainly addressed to Artificial Intelligence in Medicine AIM researchers cognitive scientists and medics interested in AIM work However the volume could provide useful text material for an advanced course in Medical Knowledge Engineering or Medical Informatics Specifying what characterizes a shallow system is not difficult namely a knowledge base of association between data about the problem and sub solutions for the problem By implication a deep system is one which has something over and above a mere associational knowledge base Most researchers agree on this point Where disagreement begins to surface is with regard to what constitutes this something else this desirable quality that a deep system should have over an associational system Deepness is a simple concept to grasp intuitively but it is not so easy to formalise in the context of computer systems it is a broad multi dimensional concept and this book aims to present different points of view about what constitutes deepness
