**Proceedings** Michael Stavola, S. J. Pearton, G. Davies, MATERIALS RESEARCH SOCIETY PITTSBURGH PA., 1988 This Proceedings volume results from a Materials Research Society symposium designed specifically to present the spectrum of defect studies in electronic materials These range from the basic physics of point and line defects in silicon and compound semiconductors to the effects of such entities on device performance Invited papers on topics that span much of the range of interest in this field are given in the first section followed by invited and contributed papers on impurities and defects in Si GaAs and other compound materials Keywords Electronic materials Defects Silicon Compound semiconductors Gallium arsenide conference mjm

**Deep Centers in Semiconductors** Sokrates T. Pantelides, 2024-12-20 Examines several key semiconductor deep centers all carefully chosen to illustrate a variety of essential concepts A deep center is a lattice defect or impurity that causes very localized bound states and energies deep in the band gap For each deep center chosen a scientist instrumental in its development discusses the theoretical and experimental techniques used to understand that center The second edition contains four new sections treating recent developments including a chapter on hydrogen in crystalline semiconductors
