Learning With Technology Mason Ross, AI, 2025-02-22 Learning With Technology explores the transformative role of technology in modern education moving beyond mere digitization to examine how technology can augment traditional teaching methods. It investigates digital education trends, the effective integration of educational apps, and their impact on student learning outcomes. The book highlights that the true potential of technology lies in fostering personalized learning and equitable access rather than simply replacing established practices. For instance, while technology offers tools for personalized learning, the book emphasizes the importance of addressing digital equity to ensure all students benefit. The book is structured in three parts: beginning with an introduction to digital education's current state, followed by a discussion of practical applications of digital tools, and concluding with an analysis of future trends like AI and virtual reality. Its multidisciplinary approach, combining pedagogical theory with empirical research, makes it a valuable resource. The book delves into the ethical considerations surrounding data privacy and security, as well as the ongoing debates about online learning effectiveness, offering a comprehensive understanding of the field.

Deep Fakes, Fake News, and Misinformation in Online Teaching and Learning Technologies Blankenship, Rebecca J., 2021-06-25 Choosing the right technologies to match student learning outcomes in today's technology-integrated classrooms presents educators and instructional designers with multiple curricula and instructional design challenges, including selecting appropriate technologies to match desired student learning outcomes. As students continue to have broad access to information from a variety of web-based platforms, educators and educational professionals are increasingly tasked with ensuring the information used to complete key assignments or tasks is authentic and from a verifiable resource. As such, the era of deep fakes in images, audios, videos, and digital texts is more prevalent than ever, as numerous programs using artificial intelligence (AI) can significantly alter original content to fundamentally change the intent of original content. Moreover, students are being bombarded by a plethora of information that is either intentionally or mistakenly false and must be navigated with care. Accordingly, educators and educational professionals are now tasked with employing best practices to not only teach basic digital literacy and citizenship skills but also to recognize how technology-immersed learning environments interact with deep fakes and misinformation while equipping students with the tools necessary to recognize authentic and altered content.

Deep Fakes, Fake News, and Misinformation in Online Teaching and Learning Technologies is a critical reference source that addresses rising concerns of students' ability to navigate the multitude of false and altered information and content that is easily accessible through online platforms. The chapters go into deeper detail about how deep fakes, fake news, and mis- and disinformation have the potential of negatively affecting the fields of teaching and learning and the importance of student access to content-related tasks from legitimate, vetted resources that accurately reflect the desired information the student means to convey. The book seeks to reinforce the importance of digital literacy and digital citizenship among adolescents. This book is essential for teaching
