Decision Analysis Location Models And Scheduling Problems:

Decision Analysis, Location Models, and Scheduling Problems H. A. Eiselt, Carl-Louis Sandblom, 2013-06-04 The purpose of this book is to provide readers with an introduction to the fields of decision making location analysis and project and machine scheduling The combination of these topics is not an accident decision analysis can be used to investigate decision scenarios in general location analysis is one of the prime examples of decision making on the strategic level project scheduling is typically concerned with decision making on the tactical level and machine scheduling deals with decision making on the operational level Some of the chapters were originally contributed by different authors and we have made every attempt to unify the notation style and most importantly the level of the exposition Similar to our book on Integer Programming and Network Models Eiselt and Sandblom 2000 the emphasis of this volume is on models rather than solution methods This is particularly important in a book that purports to promote the science of decision making As such advanced undergraduate and graduate students as well as practitioners will find this volume beneficial While different authors prefer different degrees of mathematical sophistication we have made every possible attempt to unify the approaches provide clear explanations and make this volume accessible to as many readers as possible

Foundations of Location Analysis H. A. Eiselt, Vladimir Marianov, 2011-01-13 Location analysis has matured from an area of theoretical inquiry that was designed to explain observed phenomena to a vibrant field which can be and has been used to locate items as diverse as landfills fast food outlets gas stations as well as politicians and products in issue and feature spaces Modern location science is dealt with by a diverse group of researchers and practitioners in geography economics operations research industrial engineering and computer science Given the tremendous advances location science has seen from its humble beginnings it is time to look back The contributions in this volume were written by eminent experts in the field each surveying the original contributions that created the field and then providing an up to date review of the latest contributions Specific areas that are covered in this volume include The three main fields of inquiry minisum and minimax problems and covering models Nonstandard location models including those with competitive components models that locate undesirable facilities models with probabilistic features and problems that allow interactions between facilities Descriptions and detailed examinations of exact techniques including the famed Weiszfeld method and heuristic methods ranging from Lagrangean techniques to Greedy algorithms A look at the spheres of influence that the facilities generate and that attract customers to them a topic crucial in planning retail facilities The theory of central places which other than in mathematical games where location science was born
