Decision Science And Social Risk Management:

Decision Science and Social Risk Management M.W Merkhofer,1986-11-30 Economists decision analysts management scientists and others have long argued that government should take a more scientific approach to decision making Pointing to various theories for prescribing and rational izing choices they have maintained that social goals could be achieved more effectively and at lower costs if government decisions were routinely subjected to analysis Now government policy makers are putting decision science to the test Recent government actions encourage and in some cases require government decisions to be evaluated using formally defined principles 01 rationality Will decision science pass this test The answer depends on whether analysts can quickly and successfully translate their theories into practical approaches and whether these approaches promote the solution of the complex highly uncertain and politically sensitive problems that are of greatest concern to government decision makers The future of decision science perhaps even the nation s well being depends on the outcome A major difficulty for the analysts who are being called upon by government to apply decision aiding approaches is that decision science has not yet evolved a universally accepted methodology for analyzing social decisions involving risk Numerous approaches have been proposed including variations of cost benefit analysis decision analysis and applied social welfare theory Each of these however has its limitations and deficiencies and none has a proven track record for application to govern ment decisions involving risk Cost benefit approaches have been exten sively applied by the government but most applications have been for decisions that were largely risk free

were largely risk free *Decision Science and Social Risk Management* M. W Merkhofer,1986-11-30 Tools for Making Acute Risk Decisions CCPS (Center for Chemical Process Safety),2010-09-14 The complexity of today s risk decisions is well known Beyond cost and risk there are many other factors contributing to these decisions including type of risk such as human injury or fatality the economic impact on the local community profitability availability of capital alternatives for reducing or eliminating the risk costs of implementing alternatives codes standards regulation and good industry practice This book presents a large range of decision aids for risk analysts and decision makers in industry so that vital decisions can be made in a more consistent logical and rigorous manner Though primarily aimed at the process industry this book can be used by anyone who makes similar decisions in other industries including those in management science **Contaminated Soil '95** W.J. van den Brink,R. Bosman,F. Arendt,2012-12-06 Towards sustainable land use Dr P Folstar Member of the TNO Board of Management Dr M Popp Chairman of the Board of Directors of Research Centre Karlsruhe FZK Ten years ago in 1985 TNO initiated the First Conference on Contaminated Soil in Utrecht At that time a rather complete inventory of suspected contaminated sites existed in The Netherlands Time had come to consider further actions for investigations evaluation and remediation This concern has been spreading ever since to other European countries and throughout the world In particular German scientists and authorities soon recognized the significance of this problem and consequently joined TNO in organizing and funding a forum for discussions in a series of conferences Following three venues in German cities the 5th conference in Maastricht a Dutch as well as a European city marks the increasing interest in the international scientific and political community Application of the concept of sustainable development to soil as an essential element of human existence requires an answer to the question how to meet the needs of today s generation without impairing the possibilities of mankind in the future As we do not know the needs of the future especially regarding the functional requirements of soil use we can hardly do better than starting from the present priorities This can not mean to guarantee the quality of soil functions everywhere at any time *The 5-year Outlook on Science and Technology* ,1981

Computer-Aided Decision Analysis Stuart S. Nagel,1993-06-30 The essence of decision aiding software is that it consists of various forms of microcomputer programming designed to enable users to process a set of 1 goals to be achieved 2 alternatives available for achieving them and 3 relations between goals and alternatives in order to choose the best alternative combination allocation or predictive decision rule Benefits from using decision aiding software include 1 being more explicit about goals to be achieved alternatives available for achieving them and relations between goals and alternatives 2 being stimulated to think of more goals alternatives and relations than one would otherwise be likely to do 3 being prepared to handle multiple goals alternatives and relations without getting confused and without feeling the need to resort to a single composite goal or a single go no go alternative 4 being encouraged to experiment with changes in the inputs into one s thinking to see how one s conclusions are affected and 5 being better able to achieve or exceed one s goals

when choosing among alternatives or allocating scarce resources There are five parts to the book covering 1 a broad overview of decision aiding packages including criteria for evaluating them 2 approaches that are based on management science and operations research including linear programming and decision trees 3 spreadsheet based software generally with goals on the columns alternatives on the rows relations in the cells overall totals for each alternative at the far right and a capability for indicating how the totals would be altered as a result of changes in the inputs 4 expert systems software including rule based and knowledge based expert systems and 5 general applications of decision aiding software and a discussion of the increasing utilization of such software

Judging Plans and Projects James Parkin, 1993 This study develops an approach to the evaluation of plan and project alternatives The difficult trade offs between technical or social goals and the inevitable environmental impacts are discussed in socio political terms and a case is put for the early mobilization of citizen groups in the process of assessment Current evaluation methods tend to be either threateningly mathematical or largely intuitive and often ignore the essentially political nature of public choice The methodology developed in this book enables a final decision to be made based on the use of rational judgement aids placed alongside formally structured public interest arguments representing the different social policies of the interested groups This new method informs decision makers by bringing together the strengths of analysis and richness of human values Particular attention is paid to the wide range of judgement aids available to the planning professional and examples of their use are presented in appendices
