Decision Aids For Selection Problems:

Decision Aids for Selection Problems David L. Olson, 2012-12-06 One of the most important tasks faced by decision makers in business and government is that of selection. Selection problems are challenging in that they require the balancing of multiple often conflicting criteria. In recent years a number of interesting decision aids have become available to assist in such decisions. The aim of this book is to provide a comparative survey of many of the decision aids currently available. The first chapters present general ideas which underpin the methodologies used to design these aids. Subsequent chapters then focus on specific decision aids and demonstrate some of the software which implement these ideas. A final chapter provides a comparative analysis of their strengths and weaknesses. *Building Reliable Component-based Software Systems* Ivica Crnkovic, Magnus Peter Henrik Larsson, 2002 Here is a complete guide to building reliable component based software systems. Written by world renowned experts in the component based software engineering field this unique resource helps you manage complex software through the development, evaluation and integration of software components. You quickly develop a keen awareness of the benefits and risks to be considered when developing reliable systems using components. A strong software engineering perspective helps you gain a better understanding of software component design to build systems with stronger requirements and avoid typical errors throughout the process leading to improved quality and time to market. From component definition, standards, objects and frameworks to organizational development and support of the component based life cycle, the book describes aspects of systems development using components and component development. It focuses on dependable and real time systems employing case studies from the process automation industry, software production, electronic consumer equipment and office software development. *DECISION AIDS FOR FMS PART TYPE SELECTION USING AGGREGATE PRODUCTION RATIOS TO STUDY POOLED MACHINES OF UNEQUAL SIZES* KATHRYN E. Modeling Portfolio Selection Problems Chen - Fu Chien, 1996 *Tools for Making Acute Risk Decisions*, 1994-08-15 The complexity of today's risk decisions is well known. Beyond cost and risk there are many other factors contributing to these decisions including type of risk such as human injury or fatality, the economic impact on the local community, profitability, availability of capital, alternatives for reducing or eliminating the risk, costs of implementing alternatives, codes, standards, regulation and good industry practice. This book presents a large range of decision aids for risk analysts and decision makers in industry so that vital decisions can be made in a more consistent, logical and rigorous manner. Though primarily aimed at the process industry, this book can be used by anyone who makes similar decisions in other industries.
