priority This compilation includes a reproduction of the 2019 Worldwide Threat Assessment of the U S Intelligence Community This chapter of Air University s Space Horizons Research Group presents capability requirements potential solutions and strategic rationale for achieving movement and maneuver advantage in deep space In this context deep space is anything beyond geosynchronous Earth orbit GEO Driving the research are two primary assumptions underpinning the need for investment in deep space propulsion The first assumption is that growing international activity commerce and industry in space extends the global commons thus creating a military economic imperative for the United States Department of Defense DoD to expand its protection of U S interests by defending space lines of communication Although there are wide ranging reasons to expand the space faring capabilities of the human species from the capitalistic to the existential the fact of its occurrence offers the U S immense strategic opportunity Section 1 operating on this assumption recommends capability based requirements for deep space operations given a projected future operating environment There are many candidate technologies for in space propulsion systems Presented here in brief are the most relevant to deep space operations based on their current or potential capabilities and the recommendations of experts interviewed for this study By no means is the list all inclusive but it serves as a foundation for further investigation Only a sampling of performance measures are included in order to provide context for comparison In general performance goals for advanced propulsion include improvements in thrust levels specific impulse LP power specific mass or specific power volume system mass system complexity operational complexity commonality with other spacecraft systems manufacturability durability safety reliability and cost Chemical Propulsion Advanced Cryogenic Evolved Stage ACES Nuclear Thermal Propulsion NTP and Nuclear Electric Propulsion NEP Variable Specific Impulse Magnetoplasma Rocket VASIMR Directed Energy Driven Technology Solar Thermal Propulsion Electric Propulsion Hall Effect Field Reverse Configuration and Electrospray Thrusters Mach Effect Thrusters MET EmDrive Technology Survey Summary Propulsion Assessment Approaches Existing and Breakthrough Existing Technology Using Measures of Performance and Design Reference Missions Breakthrough Propulsion Applying Vision and Rigor in Pioneering Research Assessment Approach Summary Technology Strategy Acquisition and Organizational Approach

Movement And Maneuver In Deep Space Brian E. Hans, Christopher D. Jefferson, Joshua M. Wehrle, 2020-11-24

From the authors abstract This analytical study looks at the importance of Deep Space Operations and recommends an approach for senior policy leaders Section 1 presents a capability requirements definition with candidate solutions and technology strategies Section 2 recommends an acquisition and organizational approach Section 3 provides an extended strategic rationale for deep space operations as a national priority And from the Introduction this essay presents capability requirements potential solutions and strategic rationale for achieving movement and maneuver advantage in deep space In this context deep space is anything beyond geosynchronous Earth orbit GEO Driving the research are two primary assumptions underpinning the need for investment in deep space propulsion The first assumption is that growing

international activity commerce and industry in space extends the global commons thus creating a military economic imperative for the United States Department of Defense DoD to expand its protection of U S interests by defending space lines of communication Although there are wide ranging reasons to expand the space faring capabilities of the human species from the capitalistic to the existential the fact of its occurrence offers the U S immense strategic opportunity Section 1 operating on this assumption recommends capability based requirements for deep space operations given a projected future operating environment The second driving assumption underpinning this study is that improved movement and maneuver capabilities in deep space offer a wide array of benefits for the current National Security Enterprise and for this reason alone demands attention in the form of disciplined investment Furthermore because the core functional capability required for deep space operations is in space propulsion the requirement necessitates a materiel solution **Operations Concepts for**

Deep-Space Missions Robert S. McCann,Nasa Technical Reports Server (Ntrs),2013-06 Historically manned spacecraft missions have relied heavily on real time communication links between crewmembers and ground control for generating crew activity schedules and working time critical off nominal situations On crewed missions beyond the Earth Moon system speed of light limitations will render this ground centered concept of operations obsolete A new more distributed concept of operations will have to be developed in which the crew takes on more responsibility for real time anomaly diagnosis and resolution activity planning and replanning and flight operations I will discuss the innovative information technologies human machine interfaces and simulation capabilities that must be developed in order to develop test and validate deep space mission operations *The Deep Space Field Plan* John C. Vickers,1989 **Deep Space Warriors** Julia Riding,1981-01-01

Deep Space Warfare John C. Wright,2019-11-08 Since the Cold War outer space has become of strategic importance for nations looking to seize the ultimate high ground World powers establishing a presence there must consider among other things how they will conduct warfare in orbit Leaders must dispense with Buck Rogers notions about operations in space and realize that policies there will have serious ramifications for geopolitics How should nations view space How should they fight there What would space warfare look like and how should strategists approach it Offering critical observations regarding this unique theater of international relations a military professional explores the strategic implications as human affairs move beyond Earth s atmosphere **Goldstone Deep Space Communications Complex** ,1978 Deep Space and Other Stories Stephen Shugart,1987 Into Deep Space Frank Simpson,1957
