Optimal Physical Activity across the Lifespan for People of All Abilities Ronald F. Zernicke ,David Arthur Hart, Humans evolved to be mobile within the boundary conditions of Earth and many biological and physiologic systems depend on mechanical loading to maintain integrity during growth and maturation during skeletal maturity and during the aging process These systems subscribe to the use it or lose it principle and thus require continual use to maintain integrity Given that premise considerable basic and clinical research efforts have been directed at optimizing the effectiveness and positive impact of exercise on sports performance and the well being of those with intact systems

However those with disabilities or compromised abilities also benefit from exercise protocols and there exists a need to focus attention on these populations as well. Given the myriad of biological and physiological systems that benefit from exercise and mechanical loading there is a need for all humans of varying abilities to not only maintain the integrity of their health but to attempt to optimize it recognizing that optimizing each person's health across the stages of the life cycle may require different exercise protocols dependent on stage of life, sex, genetics, and other individualized variables. For those with physical disabilities embracing and maintaining such exercise protocols may be challenging but expanded research translation of findings and integration of the outcomes into everyday life to enhance the health and well-being of this significant population are needed going forward.

Educating Emergent Bilinguals Ofelia García, Jo Anne Kleifgen, Claudia Cervantes-Soon, 2025. In this updated edition Ofelia García and Jo Anne Kleifgen are joined by Claudia Cervantes-Soon to bring forth a just vision for the education of language minoritized students in the United States. The authors use accessible language to introduce policies, programs, research, and practices to equitably educate these students. This widely used textbook has been expanded to explore the potential of translanguaging and the promises and pitfalls of Artificial Intelligence. It also addresses the harmful role that colonialism and raciolinguistic ideologies play, offering guidance for transforming policies and practices to improve the education of emergent bilinguals. Updated chapters consider the theoretical constructs, empirical evidence, and pedagogical practices related to the five most important aspects of the education of emergent bilinguals in K-12 classrooms: language and literacy considerations, curriculum and pedagogy, family and community engagement, assessment, and digital technologies and learning. Readers will find innovative recommendations to help them imagine the possibilities and make changes that will transform education for some of the most disadvantaged students. Book Features: Highlights the importance of leveraging all the linguistic and cultural practices of emergent bilinguals. Provides succinct descriptions of alternative practices for transforming our schools and students' futures. Uncovers the deleterious effects of not only colonialism but also capitalism, patriarchy, and racism. Considers the social cataclysms including a global pandemic that have affected minoritized communities as well as teachers and students. Explores the development of new technologies that are altering the ways in which we educate children.
