### **Invocational Media** Chris Chesher, 2023-10-19

Invocational Media critiques the sociotechnical power of digital technologies by introducing the concept of invocational media What is an invocation Ask your voice assistant and it will define it for you It is a media artefact that responds to many invocations such as seeking the weather forecast requesting any song you can name or turning on the lights almost magically This contemporary manifestation of the ancient practice of invocation gives an immediate response to your call in a way that Chris Chesher argues is the characteristic power of all computers which he redefines as invocational media This book challenges the foundations of computer science by offering invocation as a powerful new way of conceptualising digital technologies Drawing on media philosophy Deleuze Guattari Heidegger Latour Austin Innis and McLuhan it critiques the representationalism of data processing artificial intelligence and virtual reality Invocational media seem to empower individuals but necessarily subject users to corporate and government monopolies of invocation They offer many solutions but only by reducing everything to the same kind of act They complicate agency in their indifference as to whether invokers are human or non human With robotics they invoke material form to act physically and autonomously People willingly make themselves invocable to surveillance and control by creating their own profiles and marking themselves with biometrics This ground breaking book will change how you think about digital media by showing they are in fact invocational media

**Taming Silicon Valley** Gary F. Marcus, 2024-09-17

How Big Tech is taking advantage of us, how AI is making it worse, and how we can create a thriving AI-positive world. On balance, will AI help humanity or harm it? AI could revolutionize science, medicine, and technology and deliver us a world of abundance and better health. Or it could be a disaster leading to the downfall of democracy or even our extinction. In *Taming Silicon Valley*, Gary Marcus, one of the most trusted voices in AI, explains that we still have a choice. And that the decisions we make now about AI will shape our next century. In this short but powerful manifesto, Marcus explains how Big Tech is taking advantage of us, how AI could make things much worse, and most importantly, what we can do to safeguard our democracy, our society, and our future. Marcus explains the potential and potential risks of AI in the clearest possible terms and how Big Tech has effectively captured policymakers. He begins by laying out what is lacking in current AI, what the greatest risks of AI are, and how Big Tech has been playing both the public and the government before digging into why the US government has thus far been ineffective at reining in Big Tech. He then offers real tools for readers, including eight suggestions for what a coherent AI policy should look like, from data rights to layered AI oversight to meaningful tax reform, and closes with how ordinary citizens can push for what is so desperately needed. *Taming Silicon Valley* is both a primer on how AI has gotten to its problematic present state and a book of activism in the tradition of Abbie Hoffman's *Steal This Book* and Thomas Paine's *Common Sense*. It is a deeply important book for our perilous historical moment that every concerned citizen must read.
