Crypto Millionaires Mateusz Mach, 2024-07-19 Blockchain the key to the world of cryptocurrencies a phrase that sounds like a promise of wealth But what exactly is Blockchain Unfortunately in most books articles and discussions it is either explained in a way that's hard to understand or oversimplified with unnecessary emotional baggage presented either technically or ideologically Some see Blockchain as a savior from greedy bankers while others view it as a tool for building cryptocurrencies that undermine central banks Which image is closer to reality The story of Blockchain is not just a tale of mathematical experiments It's primarily a story of the age old attempt to record human activities and the value that flows from them This time however the goal is to make it accessible to everyone on equal terms This book delves into the evolution and technical intricacies of Blockchain technology steering clear of the common focus on mere cryptocurrency speculation It clarifies complex concepts and underscores Blockchain's capacity to revolutionize industries and empower individuals globally thereby demystifying the technology and making its profound potential accessible to everyone

Missing Each Other Edward Brodtkin, Ashley Pallathra, 2021-01-26 A Next Big Idea Club Winter 2021 Must Read The ability to connect with another person's physical and emotional state is one of the most elusive interpersonal skills to develop but this book shows you just how approachable it can be In our fast paced tech obsessed lives rarely do we pay genuine close attention to one another With all that's going on in the world and the never ending demands of our daily lives most of us are too stressed and preoccupied to be able to really listen to each other Often we misunderstand or talk past each other Many of us are left wishing that the people in our lives could really listen understand and genuinely connect with us Based on cutting edge neuroscience research and years of clinical work psychiatrist Edward Brodtkin and therapist Ashley Pallathra take us on a wide ranging and surprising journey through fields as diverse as social neuroscience and autism research music performance

pro basketball and tai chi They use these stories to introduce the four pillars of human connection Relaxed Awareness Listening Understanding and Mutual Responsiveness Accessible and engaging Missing Each Other explains the science research and biology underlying these pillars of human connection and provides exercises through which readers can improve their own skills and abilities in each

Successful Process Mining Projects Roland Woldt, 2025-09-15 Driving blind and too fast or not fast enough Most organizations have a hard time seeing where their performance lacks They see the metrics from the past but don't have visibility into how these numbers were produced What went well and what did not go so well and why So they have no idea how to improve their processes Do organizations measure the performance of their processes Well often I see only some lagging metrics being measured There are almost no predictive measures being defined and processes are not adapted to changing situations for example when it comes to delays of a supplier shipment There are just a few organizations that actually have their processes formally designed in the form of process models And those who do might see them only as an exercise to appease the gods their management or the regulators This creates interesting results when it comes to audits some poor souls figuring out what actually happens which might lead to regulatory notes that you have not made enough progress or even to hefty fines Overall I am missing an awareness of the need to measure what you are doing Some smart person once said You can only measure what you see and how boring would a football match be if we had not defined what winning means and how you can create the necessary points on the scoreboard Process Intelligence a new frontier for Process Management Over the last couple of years I have seen more interest in addressing these issues Process mining is the speedometer for your business It gives you visibility into how your processes are executed Not only the happy path that you might or might not have documented but all variations that you get from your runtime systems Process mining gives you calculated performance metrics out of the box like frequencies and times and shows you where you have rework or other unwanted behaviors Dashboards show metrics that allow you to investigate your performance hypotheses Data from mining can be embedded in existing BI dashboards You can trigger actions from thresholds and interact with running process instances think notifications alerts or transactions Process mining is embedded in a larger BPM practice You can download discovered processes to use for future state design or simulation Or you upload reference processes and the tool checks to what degree you have conformed to how the work should be done Mining technologies close the missing gap in the process lifecycle and provide a data driven analysis approach for performance management Who is this book for This book is for people who are serious about how they can improve how their organizations run and how they can make their next large transformation project a success It is for the process and architecture practitioners who run their programs for years and don't get the visibility that they deserve It is for the analysts who want to switch their practices to a data driven approach while not forgetting the human contributions in the analysis and for whom the words Digital Gemba sound good And it is for the curious folks who have heard about process intelligence and were wondering what this means and how this

fits into their organizations without creating another hype and disappointment when the results of the first project do not meet expectations. As you know the first time you do something you most likely suck and that is the same here. But wait, this is not all. This book also comes with an accompanying website which includes additional tools, all graphics as PDF and a checklist for your mining projects. It also comes with the necessary source files, data workflows, reference models in BPMN format, an ARIS database and an ARIS Process Mining project. *How to Think about Data Science* Diego

Miranda-Saavedra, 2022-12-23 This book is a timely and critical introduction for those interested in what data science is and isn't and how it should be applied. The language is conversational and the content is accessible for readers without a quantitative or computational background but at the same time it is also a practical overview of the field for the more technical readers. The overarching goal is to demystify the field and teach the reader how to develop an analytical mindset instead of following recipes. The book takes the scientist's approach of focusing on asking the right question at every step as this is the single most important factor contributing to the success of a data science project. Upon finishing this book the reader should be asking more questions than I have answered. This book is therefore a practising scientist's approach to explaining data science through questions and examples. **Stepping Stones to Christianity** Peter S. Williams, 2025-10-17

Stepping Stones to Christianity introduces a rational case for Christianity in three steps starting with scientific arguments for design in cosmology and biology moving on to philosophical arguments for the existence of God and closing with an overview of the evidence for a Christian understanding of the historical Jesus in the context of competing contemporary worldviews. By bringing together revised and expanded versions of materials written to introduce three of the author's Essays on books with Wipf Stock *Stepping Stones to Christianity* equips readers to consider the case for design in nature to investigate philosophical arguments for God and to wrestle with the identity of Jesus. *Innovation in the Anthropological Perspective*

Julia C. Gluesing, Christine Miller, Helga Wild, 2024-07-31 Innovation is a constant in human life and organization arising from within a context-based culture of social structures and beliefs. This book re-examines the processes, practices and mechanisms of innovation from an anthropological perspective offering a theory of innovation as a dynamic multidimensional system. It uses methods and stories across a broad arc of time, place, social and cultural context and subject matter. The chapters explore the intersection of virtual, local and global dynamics and deepen our understanding of aspects and dimensions of innovation that challenge common perceptions particularly in business and organizational environments. The approach aims to situate innovation in an integrated view of human and non-human ecologies and to create common ground for a new form of research and practice. **China's New Era** Annie Luman Ren, Ben Hillman, 2024-06-06 According to Communist Party discourse China's New Era began when Xi Jinping was anointed Party boss in 2012. The shape of this New Era became eminently clear in 2023 when Xi commenced his third five-year term as General Secretary of the Party, a fortification of one-man authoritarian rule unprecedented in post-Mao China. Under Xi the Party has expanded its influence over government, the

economy and society The Party State is now more Party than State The year 2023 saw other new eras for China as well Despite initial optimism sparked by the end of COVID 19 restrictions in late 2022 the Chinese economy in 2023 was buffeted by continuing property sector woes record unemployment and an unfolding local government debt crisis Globally China adopted a series of new and ambitious diplomatic initiatives to woo the Global South and amplify its voice on the world stage The China Story Yearbook 2023 China's New Era provides informed perspectives on these and other important stories that will resonate for years to come
