**Learning** Papadakis, Stamatios, Kalogiannakis, Michail, 2020-12-05 Over the last few years increasing attention has been focused on the development of children s acquisition of 21st century skills and digital competences Consequently many education scholars have argued that teaching technology to young children is vital in keeping up with 21st century employment patterns Technologies such as those that involve robotics or coding apps come at a time when the demand for computing jobs around the globe is at an all time high while its supply is at an all time low There is no doubt that coding with robotics is a wonderful tool for learners of all ages as it provides a catalyst to introduce them to computational thinking algorithmic thinking and project management Additionally recent studies argue that the use of a developmentally appropriate robotics curriculum can help to change negative stereotypes and ideas children may initially have about technology and engineering The Handbook of Research on Using Educational Robotics to Facilitate Student Learning is an edited book that advocates for a new approach to computational thinking and computing education with the use of educational robotics and coding apps The book argues that while learning about computing young people should also have opportunities to create with computing which have a direct impact on their lives and their communities It develops two key dimensions for understanding

and developing educational experiences that support students in engaging in computational action 1 computational identity which shows the importance of young people s development of scientific identity for future STEM growth and 2 digital empowerment to instill the belief that they can put their computational identity into action in authentic and meaningful ways Covering subthemes including student competency and assessment programming education and teacher and mentor development this book is ideal for teachers instructional designers educational technology developers school administrators academicians researchers and students Teaching Coding in K-12 Schools Therese Keane,Andrew E. Fluck,2023-02-27

This book contains highly effective ways to teach coding and computational thinking skills throughout primary and secondary schooling It outlines a research informed path for students from birth to 18 years identifying key skills and learning activities Based on global perspectives and research at each stage it outlines how these findings can be applied in the classroom Teaching coding to students in K 12 has been a skillset that has been debated across educational jurisdictions globally for some time The book provides examples of schools that are teaching coding to students in engaging and relevant ways delivering well thought out compulsory curriculums Additionally it provides examples of schools where coding is not mandated in the curriculum and is taught in an ad hoc manner Through the full discussion of all of these varied examples the book presents both sides of the serious and ongoing debate in the field as to whether coding should be taught in an explicit way at all The increasing school of thought that teaching coding is a skill that is already obsolete and the focus should be on computational thinking is completely examined and presented In this book both sides of the argument as well as the specific meticulous research underlying each side are given equal weight The debate is a serious one and requires a clearly defined thematic response with evidence on all sides of the argument presented rationally This book does just that Created by carefully selected authors from around the world it will be a highly studied research reference **Advances in Data-driven**
