A Beginner's Guide to Introduce Artificial Intelligence in Teaching and Learning Muralidhar Kurni, Mujeeb Shaik Mohammed, Srinivasa K G, 2023-06-28 This book reimagines education in today's Artificial Intelligence AI world and the Fourth Industrial Revolution. Artificial intelligence will drastically affect every industry and sector, and education is no exception. This book aims at how AI may impact the teaching and learning process in education. This book is designed to demystify AI for teachers and learners. This book will help improve education and support institutions in the phenomena of the emergence of AI in teaching and learning. This book presents a comprehensive study of how AI improves teaching and learning from AI-based learning platforms to AI-assisted proctored examinations. This book provides educators, learners, and administrators on how AI makes sense in their everyday practice. Describing the application of AI in ten key aspects, this comprehensive volume prepares educational leaders, designers, researchers, and policymakers to effectively rethink the teaching and learning process and environments that students need to thrive. The readers of this book never fall behind the fast pace and promising innovations of today's most advanced learning technology.

We, robots Lode Lauwaert, Bartek Chomanski, 2025-01-27 This book takes a philosophical look at traditional technological tools such as hammers and drills as well as the modern autonomous cars, ChatGPT, smartphones, apps, steam engines, nuclear power plants, computers, and many other systems that surround us. The three main questions tackled are: Is technology neutral? Or is the design often intertwined with a Western or gendered perspective? What are the ethical risks of AI? Is it necessarily biased? Is the climate problem linked to smart technologies? Is technological determinism correct? In other words, is the world controlled by engineers since the digital revolution, or are their inventions merely a product of society? Lode Lauwaert and Bartek Chomanski offer an idiosyncratic perspective on technology and AI. The result is a nuanced and critical view of the key themes of our time. This book appeals broadly to students, researchers, as well as non-academic audiences for an introduction to the philosophy of technology and AI. This book explores key themes that all revolve around the idea that technology is not neutral. This is a message for all of us. Because technology is us.
