Measuring and Accounting for Innovation in the Twenty-First Century Carol Corrado, Jonathan Haskel, Javier Miranda, Daniel Sichel, 2021-05-18 Measuring innovation is a challenging task both for researchers and for national statisticians and it is increasingly important in light of the ongoing digital revolution National accounts and many other economic statistics were designed before the emergence of the digital economy and the growth in importance of intangible capital They do not yet fully capture the wide range of innovative activity that is observed in modern economies This volume examines how to measure innovation track its effects on economic activity and on prices and understand how it has changed the structure of production processes labor markets and organizational form and operation in business The contributors explore new approaches to and data sources for measurement such as collecting data for a particular innovation as opposed to a firm and using trademarks for tracking innovation They also consider the connections between university based R D and business start ups and the potential impacts of innovation on income distribution The research suggests strategies for expanding current

measurement frameworks to better capture innovative activity including developing more detailed tracking of global value chains to identify innovation across time and space and expanding the measurement of innovation's impacts on GDP in fields such as consumer content delivery and cloud computing

Digital Diplomacy in the OSCE Region Erman Akıllı, Burak Güneş, Oğuz Güner, 2024-03-14 This edited volume examines the practices and applications of digital diplomacy in the OSCE Region. As a security organization, the Organization for Security and Cooperation in Europe (OSCE) prioritizes its member states' cyber security and cyberspace activities. The book examines two key areas where digital diplomacy challenges traditional diplomatic practices of the OSCE member States: institutional adaptation and policy innovation in the OSCE Region. It 1) investigates how capable and motivated foreign ministries are at the institutional level to shift to digital diplomacy and 2) explores how digital diplomacy affects the fundamental diplomatic tasks of representation, communication and relationship management at the policy level. Technological advances in IT and the Internet's widespread introduction in the wake of the 2000s provided new territories to conquer for states to pursue their interests. Moreover, technological developments and media attention enhanced information flow and communication through new platforms like online encyclopedias (i.e. Wikipedia), video sharing sites (i.e. YouTube) and social media platforms (i.e. Facebook, Instagram, Twitter). Because of these transformations, public opinion became influential in diplomacy and a greater need to include foreign publics as part of foreign policy goals emerged. Introducing case studies from several OSCE countries presented by an international group of authors, this book provides a timely response to current affairs and policy debates by providing pluralistic perspectives from different countries and disciplines such as international relations, political science, international law and political economy. It will appeal to students, researchers and scholars of the aforementioned disciplines as well as policy makers and practitioners interested in a better understanding of digital democracy and digital diplomacy in the OSCE region.
