Artificial Intelligence and the Future of Work: Humans in Control Ekkehard Ernst, Janine Berg, Phoebe V. Moore, 2024-10-01 Artificial Intelligence AI is rapidly advancing in areas such as pattern detection classification and prediction which were long thought to be the exclusive realm of humans. These developments are triggering excitement about the potential of AI but are also raising concerns about possible risks. The versatility of AI and its speed of development have led to a wide range of applications both in personal and professional environments. The most dramatic effects are however in the world of work AI is impacting job loss and employability and causing a transformation of tasks in a range of occupations and sectors. It is also affecting other aspects of the labor market such as recruitment performance monitoring and dismissal. As such the development and implementation of AI are raising concerns about the future of work both in terms of its mere existence and quality with critical implications for the social fabric as well as future development prospects.
