Coping With Population Challenges:

Coping with Population Challenges Louise Lassonde, 2014-04-23 Despite rapidly decreasing rates of population growth caused by reduced fertility in the majority of world regions demographers are predicting that the world's population will still double by the year 2050. The question is therefore no longer the traditional one of whether the planet can support so many people but how to provide a sustainable future for ten billion individuals. Quantitative problems have become ethical ones. *Coping with Population Challenges* addresses these issues in the context of international debate and agreements since the first World Population Plan of Action in 1974 to the 20 year Programme of Action adopted at the International Conference on Population and Development in Cairo in 1994. The author describes how the Programme of Action focalizes on women's issues reproductive choice and the notion of the individual. However she identifies a number of important but neglected areas of the debate that the Programme failed to address and brings to light some of the inconsistencies that need to be resolved if the Programme is to be implemented. The author also looks at the underlying ethical dimension of all choices relating to the population issue and suggests measures and machinery for giving effect to states commitments including reformulating problems and defining the appropriate economic framework for solutions. The book is an excellent introduction for the non specialist to a very topical debate and a useful reference for researchers. LOUISE LASSONDE is director of the Fondation du Devenir Geneva. In her capacity as anthropologist and demographer Dr Lassonde has worked closely with the United Nations and non governmental organizations in many countries. Originally published in 1997. *Coping and the Challenge of Resilience* Erica Frydenberg, 2017-03-10 This book addresses how best to meet everyday challenges. The author focuses on how to think and act differently about what we do as we face challenges and how to assess each situation as one of challenge rather than threat or harm because we have the strategies to cope. Spanning eleven chapters the book examines the best ways to provide the core skills for life to children adolescents and adults and how that is best achieved through the contemporary theories of coping. Coping has traditionally been defined in terms of reaction that is how people respond after or during a stressful event. More recently coping is being defined more broadly to include anticipatory preventive and proactive coping. This book provides case studies of resilient adults in a range of settings highlighting how coping resources have helped them to overcome adversity. Researchers students of psychology and social work practitioners and those interested in the self help field will find this book invaluable. *Coping with Population Growth* Nicola Barber, 2011 Looks at the issues caused by global population growth including overcrowding resource depletion and disease. Environmental Change and Security Alexander Carius, Kurt M. Lietzmann, 2013-11-21 Does a connection exist between environmental degradation resource scarcity and violent conflicts? Global environmental changes such as climate change and sea level rise shortage of fresh water and rapid soil degradation increasingly highlight the dimensions of environmental change in foreign and security policy. To reverse these negative environmental consequences over the long term comprehensive and preventive

policy approaches are urgently required This state of the art book contains numerous articles by renown German speaking experts from different scientific disciplines as well as international and European political advisors and diplomats Together they discuss the complex causes of environmentally induced conflicts and the political and societal mechanisms for conflict prevention

China's New Normal, Supply-side, and Structural Reform Cai Fang, 2021-11-29 China s continuous rapid economic growth since the Reform and Opening up of the country in the early 1980s has been praised as a miracle of the world economy However since 2012 the rate of growth has slowed down rendering some people pessimistic about the country s economic prospects This title is a collection of a leading Chinese economists views on China s economic growth and structural reform The author argues that China s economy has entered the new normal meaning that slowed growth rate is not a cyclical phenomenon but a change in the stage of economic development Therefore there is a need to enact supply side structural reforms such as improved efficiency of resource reallocation while shifting the mode of development from one of inputs to innovation In addition the author discusses the five major concepts of development proposed for the 13th Five Year Plan as well as some critical topics related to supply side structural reform such as agricultural development labor employment and product quality Scholars and students of macroeconomics development economics and the Chinese economy will find this book to be essential reading
