Surjan,2003-07-01 Development in science depends on several factors Among these the role of individual scientists is perhaps not the most important one Science is typically a body of collective knowledge and any increase in the amount of this knowledge is certainly due to strong interaction among scientists Even in the past it happened quite rarely that a single person without any aid of others d covered something fundamental or opened a new chapter in science Great figures of science history have in most cases had rather a summarizing and s thesizing role This is especially valid over the last few decades On one hand the amount of information necessary to achieve new discoveries has increased tremendously On the other hand improvement of technical facilities has increased the speed of information exchange These factors resulted in a degree of specialization in science that had never seen before Most of us are experts and specialists rather than scientists in the classical sense My personal feeling is that even nowadays there is a strong need for professionals with a broad knowledge and c prehensive mind although they may not be competitive in the number of their publications or the sizes of their grants Every time I have met such a person I can count these cases on my fingers I have become deeply influenced by his or her strong intellect Intelligent Information and Database Systems Ngoc Thanh Nguyen,Chong-Gun Kim,Adam Janiak,2011-04-04 The two volume set LNAI 6591 and LNCS 6592 constitutes the refereed proceedings of the Third International Conference on Intelligent Information and Database Systems ACIIDS 2011 held in Daegu Korea in April 2011 The 110 revised papers presented together with 2 keynote speeches were carefully reviewed and selected from 310 submissions The papers are thematically divided into two volumes they cover the following topics intelligent database systems data warehouses and data mining natural language processing and computational linguistics semantic Web social networks and recommendation systems technologies for intelligent information systems collaborative systems and applications e business and e commerce systems e learning systems information modeling and requirements engineering information retrieval systems intelligent agents and multi agent systems intelligent information systems intelligent internet systems intelligent optimization techniques object relational DBMS ontologies and knowledge sharing semi structured and XML database systems unified modeling language and unified processes Web services and semantic Web computer networks and communication systems *Atoms and Molecules in the Ground State* Odilon Chalvet,Raymond Daudel,Simon Diner,Jean Paul Malrieu,2012-12-06 *Complex Mediums* ,2005 **An Introduction to Comparative Psychology** Conway Lloyd Morgan,1896 **Global Frontiers in Heart Valve Interventions** Peter Zilla,Vinod H.
