

Corpus Linguistics

- ❧ Linguistics being the scientific study of language and its structure, 'corpus linguistics' is the study of language "on the basis of text corpora."
- ❧ The analysis does not stop at the description of those texts; rather the contexts are also focused upon.
- ❧ A **corpus** is a collection of machine-readable, authentic texts, chosen to characterize or represent a state or variety of a language.

Corpus Linguistics:

The Changing Face of Corpus Linguistics Antoinette Renouf, Andrew Kehoe, 2006 This volume is witness to a spirited and fruitful period in the evolution of corpus linguistics In twenty two articles written by established corpus linguists members of the ICAME International Computer Archive of Modern and Mediaeval English association this new volume brings the reader up to date with the cycle of activities which make up this field of study as it is today dealing with corpus creation language varieties diachronic corpus study from the past to present present day synchronic corpus study the web as corpus and corpus linguistics and grammatical theory It thus serves as a valuable guide to the state of the art for linguistic researchers teachers and language learners of all persuasions After over twenty years of evolution corpus linguistics has matured incorporating nowadays not just small medium and large primary corpus building but also specialised and multi dimensional secondary corpus building not just corpus analysis but also corpus evaluation not just an initial application of theory but self reflection and a new concern with theory in the light of experience The volume also highlights the growing emphasis on language as a changing phenomenon both in terms of established historical study and the newer short range diachronic study of 20th century and current English and the growing area of overlap between these two Another section of the volume illustrates the recent changes in the definition of corpus which have come about due to the emergence of new technologies and in particular of the availability of texts on the world wide web The volume culminates in the contributions by a group of corpus grammarians to a timely and novel discussion panel on the relationship between corpus linguistics and grammatical theory

Corpus Linguistics at Work Elena Tognini-Bonelli, 2001-04-11 The book offers a combined discussion of the main theoretical methodological and application issues related to corpus work Thus starting from the definition of what is a corpus and why reading a corpus calls for a different methodology from reading a text the underlying assumptions behind corpus work are discussed The two main approaches to corpus work are discussed as the corpus based and the corpus driven approach and the theoretical positions underlying them explored in detail The book adopts and exemplifies the parameters of the corpus driven approach and posits a new unit of linguistic description defined

systematically in the light of corpus evidence The applications where the corpus driven approach is exemplified are language teaching and contrastive linguistics Alternating between practical examples and theoretical evaluation the reader is led step by step to a detailed understanding of the issues involved in corpus work and at the same time tempted to explore for himself some of the major applications where a corpus driven methodology can reveal unprecedented insights into linguistic

developed and surveys the major approaches to the use of corpus data. It uses a broad range of examples to show how corpus data has led to methodological and theoretical innovation in linguistics in general. Clear and detailed explanations lay out the key issues of method and theory in contemporary corpus linguistics. A structured and coherent narrative links the historical development of the field to current topics in mainstream linguistics. Practical tasks and questions for discussion at the end of each chapter encourage students to test their understanding of what they have read and an extensive glossary provides easy access to definitions of technical terms used in the text.
